

Graduate Program in Biomedical Sciences

2015-2016

Catalog

Revised: July 2, 2015

CORRESPONDENCE

For information on the Graduate Program in Biomedical Sciences (GPBS) please contact:

Graduate Program in Biomedical Sciences Office Universidad Central Del Caribe P.O. Box 60327 Bayamon, PR 00960-6032 lissette.arroyo@uccaribe.edu www.uccaribe.edu/biomed/

NOTE: The information in this catalog is subject to change without notice. The Universidad Central del Caribe reserves the right to make changes as deemed necessary in calendars, fees, policies, academic requirements, regulations, programs, and other subjects, after its publication date.

AFFIRMATIVE ACTION POLICY

The Universidad Central del Caribe (UCC) recognizes the right of all persons to work and to advance on the basis of their merit, ability and potential, and is therefore committed to taking any and all steps necessary to identify and alter policies, practices, or other institutional barriers which cause or perpetuate inequality. It is the policy of this university to recruit, employ, and promote staff and to admit and serve students without regard to race, color, ethnic or national origin, gender, sexual orientation, gender identity and expression, religion, age, ancestry, disability, genetic information, military obligations, veteran status or marital status.

RIGHTS AND RESPONSIBILITIES OF GRADUATE STUDENTS

Students have the responsibility to familiarize themselves with the policies and procedures of the University, the Graduate Program in Biomedical Sciences (GPBS), and their department or program. Students are primarily responsible for knowing the degree requirements and following the policies that govern their academic program. If students have concerns or doubts about individual policies and procedures, they may contact their advisor, their department GPBS coordinator or chairperson, or the Office of the Associate Dean for Research and Graduate Studies.

MISSION AND GOAL OF THE UNIVERSIDAD CENTRAL DEL CARIBE

Mission of the Universidad Central Del Caribe

To prepare high-quality and committed health professionals to meet the health needs of the community in its biological, physical and social context with a humanistic focus and a high sense of moral obligation. It is characterized by its emphasis on the excellence of its educational programs, research activities and services of health maintenance, prevention, and early detection of illness. It is committed to improving the quality of life of the Puerto Rican community through its services, as well as to developing health care professionals.

Goal of the UCC

What distinguishes UCC from other institutions in Puerto Rico is its unwavering goal to prepare high quality health professionals who can offer preventive care, promote healthy lifestyles, and provide excellent services with humanism, compassion and the highest ethical values. Particular characteristics of the institution are its intensive and extensive program of practical experiences in clinical settings in the community, regardless of their program of study, and its longstanding record of public/private partnerships and service-linked education.

MISSION OF THE GRADUATE PROGRAM IN BIOMEDICAL SCIENCES

The mission of the Graduate Program in Biomedical Sciences is to provide a rigorous and stimulating research and training environment for UCC students.

Our students provide the intellectual resources needed to advance the research and educational goals of the institution and to provide a new generation of scientists. The faculty is committed to excellence in interdisciplinary research training for qualified candidates who will continue to advance the fundamental knowledge needed to conquer disease and promote health and improved quality of life for all people. The knowledge and skills acquired will enable the graduate to be successful in biomedical research conducted at universities, government and private industry laboratories, as well as in education.

GENERAL INFORMATION

The Universidad Central del Caribe was founded in 1976, in Cayey, Puerto Rico, as a private nonprofit institution, incorporated under the laws of the Commonwealth of Puerto Rico. The first educational units established were the School of Medicine, with a four-year program leading to the M.D. degree, and the Radiologic Technology Program. The Puerto Rico Council of Education (PRCE) has duly authorized both programs. The program leading to the M.D. degree holds accreditation from the Liaison Committee on Medical Education (LCME). Graduate medical education is accredited by the Accreditation Council Graduate Medical Education (ACGME). The Radiologic Technology Program holds accreditation from the Joint Review Committee on Education in Radiologic Technology.

In 1989, the PRCE authorized the Graduate Program in Biomedical Sciences (GPBS) within the School of Medicine. This program offers a Doctor of Philosophy in Cellular and Molecular Biology, a Doctor of Philosophy in Neuroscience, Masters in Science or in Arts in Anatomy and Cell Biology, Biochemistry, Microbiology and Immunology, Neuroscience, Pharmacology, and Physiology.

In 1984, the university began its relationship with the Health Department of the Commonwealth of Puerto Rico. Since September 1990, all university facilities have been integrated into one campus at the grounds of the Dr. Ramón Ruiz Arnau University Hospital in the city of Bayamón. As a result, the Dr. Ramón Ruiz Arnau Hospital was established as the University Hospital. In addition, the network of municipal health centers that provide primary care services within the Northeastern Health Region became a site for clinical teaching.

Other academics programs authorized by the PRCE include: the Certificate Program in Diagnostic Medical Sonography, the Substance Abuse Counseling Program, the Certificate Program in Mammography, and the bachelors in Medical Imaging.

The Substance Abuse Program offers the Post-Baccalaureate Certificate in Substance Abuse Counseling and the Master of Health Sciences in Substance Abuse Counseling.

GOVERNANCE AND ADMINISTRATION

The Board of Trustees outlines the general policies and supervises the operations of the university. Prestigious members of our community volunteer their participation in this governing body. The president of the university is appointed by the Board of Trustees and is the Chief Executive Officer of the university. The deans are appointed by the Board of Trustees upon the president's recommendation and are responsible to the president. The board, upon the recommendation of the president, approves appointments of all administrative officials and faculty, after consultation with the deans and faculty.

The Dean for Academic Affairs is the university's Chief Academic Officer. The Dean for Admissions and Student Affairs supervises all student services and the admissions process of all university programs. The Dean of Administration oversees all administrative and support services.

The School of Medicine is divided into basic sciences and clinical departments, and their chairs respond directly to the Dean of Medicine. The Associate Dean for Research and Graduate Studies also responds to the Dean of Medicine.

The Medical Images Technology Program, including the specialties of Diagnostic Sonography and Mammography, has a program director who in turn responds to the Dean for Academic Affairs.

The Certificate in Substance Abuse Counseling and the Master of Health Sciences in Substance Abuse Counseling programs are supervised by a program director who in turn responds to the Dean for Academic Affairs.

GPBS Administration

Luis Angel Cubano, Ph.D. Associate Dean for Research and Graduate Studies

GPBS Department Coordinators

Department	Coordinator
Anatomy and Cell Biology	Wilson Veras
Biochemistry	Wanda Velez
Microbiology	Jose W. Rodriguez
Neuroscience	Ramon Jorquera
Pharmacology	Hector Maldonado
Physiology	Amelia Rivera

TEACHING AND RESEARCH FACILITIES

Space and Equipment

Modern, high quality equipment is available for teaching and research purposes. Service and administrative areas in each department support departmental research. One common instrumentation laboratory, a tissue culture laboratory, an electromechanical shop, an immunoretrovirology laboratory core facility, an animal house, a biomedical proteomic facility and a radioisotope laboratory supplement the laboratories.

The Biomedical Sciences Building has five lecture rooms, four student laboratories and a Learning Resources Center. Students perform laboratory work in Gross Anatomy, Histology and Embryology, Neuroanatomy, Biochemistry, Microbiology, Pharmacology and Physiology. In addition, the School of Medicine operates three lecture rooms in the Ramón Ruiz Arnau Hospital.

Technical Assistance

All the basic sciences departments have laboratory technicians and/or research assistants to help carry out the research work performed by the faculty. The School of Medicine through the RCMI program provides an electromechanical technician who also helps out in the research endeavors.

Research Centers

Cell and Molecular Biology Center (CMBC)

The CMBC is an interdisciplinary group of researchers from all of the basic sciences departments at our Institution with common and interrelated research interests in cell and molecular biology. The CMBC coordinates seminars, workshops, and an annual research day for UCC researchers, where conceptual and technical advances in cell and molecular biology are presented and demonstrated by distinguished visiting scientists and commercial instrumentation representatives. Center researchers mainly work in the areas of signal transduction and functional genomics.

Center for Addiction Studies (CAS)

The CAS was established with the purpose of expanding scientific knowledge on substance abuse, HIV/AIDS, and related topics. The objectives of the center are: a) to estimate the prevalence of drug use, abuse, and dependence in the Puerto Rican population; b) describe the patterns of drug use and associated factors; and c) examine the relationship between substance abuse and other physical and mental health conditions. The CAS aims to provide empirical knowledge as the basis for the preparation of health professionals that provide substance abuse and drug treatment services. The center also maintains scientific databases that serve as reference for public policy making.

Center for Translational Neuroscience Research

The purpose of the CTNR is to facilitate research on translational neuroscience at UCC. The goal of the Center is to develop novel therapeutic agents and markers for the treatment and diagnostic of neurodegenerative diseases in collaboration with the Caribbean Primate Research Center and the Morehouse School of Medicine in Atlanta, Georgia.

The Center pursues this goal through basic neuroscience research and preclinical studies of candidate drugs for neuroprotection. Currently, the Center focuses on the role of neuronal nicotinic acetylcholine receptors (AChRs) and AChRs linked neuroprotective pathways to develop new approaches to the treatment of neurological disorders.

Neuroscience Research Center (NRC)

The NRC was established in 1990 for the purpose of promoting neuroscience research in Puerto Rico. Organized as an inter-institutional association of neuroscientists with headquarters at the UCC, it has enjoyed RCMI support since 1991. At present, NRC is composed of scientists from four Puerto

Rican universities, as well as associate and student members. Research projects address issues ranging from the basic mechanism of cocaine addiction, excitotoxicity and neuroprotection, to ion channel function and signal transduction pathways. Numerous collaborations with colleagues from many universities are in place. This center also organizes the Puerto Rico Neurosciences Conference, held annually since 1992.

Retrovirus Research Center (RRC)

The RRC is a multidisciplinary research center for the study of HIV/AIDS and other retroviruses. Its general goal is to promote and facilitate HIV/AIDS and other retrovirus research in Puerto Rico. The RRC promotes the study of HIV infection as a multidisciplinary research arena in which the clinical features, immunological, and virological elements and the psychological and behavioral parameters need to be integrated into a coherent research strategy. The center brings together a coalition of multidisciplinary researchers whose interest is to describe and understand key elements that play a role in the progression and/or expression of HIV infection according to an ecological view of the problem.

The Retrovirus Research Center laboratory provides clinical laboratory service, under RCMI support and a fee-for-service system, as part of an institutionalizing plan. The laboratory provides the research community with: a) standardized methodology for the rapid detection, identification, and quantification of HIV infection; b) standardized methodology for the characterization of sexually transmitted diseases, viral hepatitis, and mycobacterium; c) immunological services and expertise in the analysis and delineation of lymphocyte populations; d) facility for the determination of cytokines, chemokines, and proliferative response; e) facility to continue a repository of lymphocyte, plasma, and serum from HIV-infected individuals registered in the Data Core Facility; f) anti-retroviral drug susceptibility genotyping pattern in the HIV-infected population; and g) organized clinical laboratory support to the Data Core Facility and individual pilot projects.

University Center for Integrative and Complementary Medicine (CUMIC)

The CUMIC was founded in 2001 with the purpose of providing treatment and education about complementary and alternative medicine and fomenting research. The CUMIC coordinates seminars to stimulate the participation in alternative medicine research with special interest in the use of natural compounds for the treatment of disease. The center is currently active in cancer research.

Research Facilities

UCC has research laboratories and specialized research facilities with the necessary equipment to perform the research according to the interest of the researcher. The average size of the laboratories is 180 square feet. The individual research laboratories are complemented with common instrumentation areas, a cell culture laboratory, a retrovirology laboratory, an electron microscope, and a radioisotope laboratory.

The specialized research facilities are:

Animal Resources Center (ARC)

The Animal Resources Center is staffed with personnel specialized in animal care and handling to support research and education activities. The ARC houses small and large animals in its 7,700 square feet facility and provides information concerning purchasing, basic husbandry, quarantine, and veterinary medical care of laboratory animals.

The ARC also provides technical assistance and advice dealing with animal species used for investigation and supports the research programs by making animals, materials, and animal husbandry supplies readily available.

The ARC is equipped with specialized areas to provide the following services: necropsy, stock and treatment, quarantine, bedding, cage washing, and storage. The facilities also include an experimental surgery area with surgical, scrub, sterilizing, and recovery rooms.

Behavioral Testing Facility (BTF)

The Behavioral Testing Facility was created to facilitate the development of neuroscience research at the Universidad Central del Caribe, recognizing the importance of behavioral testing. The BTF has two (2) major components: the equipment infrastructure and the technical support division. The facility offers equipment for remote behavior visualization (RBV).

Biomedical Proteomic Facility (BPF)

The mission of the BPF is to accelerate discovery by giving UCC investigators access to cutting edge technologies in proteomics and in mass spectrometry. The facility stimulates the use of 2D gels and protein analysis, via a proteomic imaging software, by the faculty. The aim is to provide separation and mass spectrometry techniques for the quantitative analysis of the proteome. One major objective is to identify disease and other relevant biological markers.

Common Instrumentation and Technical Support Unit

This core area houses major equipment such as ultracentrifuges, freezers, spectrophotometers, gamma counters, etc, as well as the centralized cell culture facility. It fosters equipment sharing, centralizes maintenance of equipment, and provides repair for the equipment of all the projects.

Data Management and Statistical Research Support Unit (DMSRSU)

The DMSRSU provides study design, data management, quality assurance, and statistical analysis support for UCC researchers. The DMSRSU has a strong infrastructure which includes the following subunits: Data Abstraction and Management; Data Entry; Quality Control; Data Analysis and Consultant; and Administrative and Computer Systems. Each of these subunits consists of experienced professionals readily available to assist researchers and to provide data management and statistical research support to investigators. In addition, the DMSRSU counts on a highly experienced and reliable consulting team.

HIV and Substance of Abuse Laboratory

The laboratory supports research in the areas of HIV/AIDS and substances of abuse. Specialized facilities are made available to researchers for scientific studies in fields of immunology, drugs of abuse, HIV/AIDS, and related infectious diseases. This core laboratory provides researchers with assays for nucleic acids detection, virus genotyping, flow cytometric phenotyping, lymphocyte proliferation, cytotoxic and non-cytotoxic activity, cytokine and chemokine determinations, and drugs of abuse quantification.

Immunocytochemistry Laboratory

The Immunocytochemistry Laboratory specializes in the qualitative identification and localization of cells bearing selective markers by employing specific antibodies to these molecules.

Neuronal Glia Culture Facility

The goal of the facility is to assist UCC investigators in the use of cultured neurons, glias, and organotypic cultures. The cultures are used for patch clamping after in vitro treatments with drugs of addiction or inhibitors and for in vitro models of neurodegenerative diseases. The core facility consists of a coordinator and a technician. Neuronal cultures are prepared from fetal cortex, hippocampus, or astrocytes from cerebral cortex.

Optical Imaging Facility

The facility offers microscope-based systems that allow the assessment of cellular responses, such as calcium signaling with fast temporal resolution. The facility offers: a) confocal imaging services; b) brightfield, darkfield, phase contrast, Nomarski, and epi-fluorescence imaging; c) high spatial and temporal resolution imaging; d) collection of serial sections (deconvolution capabilities); and e) morphometric analysis.

Protein and Nucleic Acid Core Facility (PNACF)

The PNACF aids in the transition from classical to molecular analysis of the problems being addressed by faculty members. The PNACF focuses on faculty training, seminars, training on specialized molecular biology techniques, protein expression, and protein purification and characterization.

Transmission Electron Microscopy Laboratory

The TEM laboratory provides access to ultrastructural analysis of biological specimens via a Jeol 100 CX transmission electron microscope. The TEM is equipped with AMT 4 MP digital camera to facilitate image acquisition and 3D reconstruction from serial sections. In addition, to conventional EM procedures of in situ and cell culture specimens the laboratory also offers immunogold labeling and the visualization of fluorescent dyes after photoconversion.

Research Support Programs

Biomedical Research Administration Development (BRAD)

BRAD promotes the establishment of biomedical research and research-related training programs by providing support for strengthening institutional research administration infrastructures. This program provides training in NIH policies and procedures. The goal of the BRAD program is to facilitate the administrative management of extramural grant awards, and foster and facilitate research activities.

Minority Biomedical Research Support (MBRS)

The purpose of the MBRS programs is to increase the numbers of underrepresented minority faculty, investigators, and students engaged in biomedical or behavioral research and to broaden the opportunities for participation in biomedical or behavioral research of underrepresented minority faculty and students.

Research Centers in Minority Institutions (RCMI)

RCMI provides funding to recruit established and promising researchers, acquire advanced instrumentation, modify laboratories for competitive research, fund core research facilities, and other research support. Because many investigators at RCMI institutions study diseases that disproportionately affect minorities, RCMI support serves the dual purpose of bringing more minority scientists into mainstream research and enhancing studies of minority health.

Specialized Neuroscience Research Programs (SNRP)

The SNRP strives to help minority institutions develop state-of-the-art neuroscience research programs; to increase ongoing research, stimulating academic and intellectual milieu that will inspire and prepare students and fellows to pursue research careers in neuroscience; and to provide support for the pilot research needed to show the skills and abilities of investigators by obtaining the preliminary data and publications that can help ensure successful competition for traditional research project grants during the performance period of the award.

Research Support Offices

Office of the Associate Dean for Research and Graduate Studies (OADRGS)

The main goal of the OADRGS is to actively facilitate and promote interdisciplinary research enterprises and curriculum development within UCC's academic community. The OADRGS is devoted to establishing and implementing pre-and-post award procedures, assist researchers in the preparation of proposals and publications, establishing a strong profile for generation of external revenue and research grant funding, and fostering research collaborations.

Research Development Office (RDO)

The RDO provides technical assistance to faculty in the development and preparation of proposals, contracts, cooperative agreements, etc by performing program guideline review and analysis, preparation of complex budgets, processing of proposals, and electronic proposal submission.

The RDO manages the Sponsored Programs Information Network (SPIN) and Federal Grants and Contracts Weekly databases for identifying potential grant opportunities and makes available pilot project funding, to obtain preliminary data for grant applications.

Sponsored Programs Office (SPO)

The SPO facilitates the successful competition for external funding, assist in the management of and compliance in sponsored projects. The Office negotiates contracts and grants with a wide variety of sponsors, assist in the management of external funds.

Scientific Resources Development Unit (SRDU)

The SRDU is responsible for the professional development and continued education of junior and senior research faculty. The unit provides training programs that address the competencies that junior research faculty require to successfully develop into senior research faculty, including the development and management of research projects, the acquisition and management of grants and the communication of the results obtained.

Graduate Student Association

The Graduate Student Association (GSA) comprises degree seeking graduate students at the Universidad Central del Caribe. The GSA mission is to enrich the graduate student experience and to represent, support, and promote graduate student interests. The GSA provides programs and services aiding in recruitment and retention of graduate students, represents graduate student interests to the University administration, and builds a sense of community among graduate students.

The President of the Graduate Student Association will represent the association in the Student Council. The directors of the Graduate Student Association (President and Secretary) will be elected during the Student Council election.

PROGRAM ADMINISTRATIVE PROCEDURES

Deanship for Admissions and Student Affairs

The Deanship for Admissions and Student Affairs is responsible for the administration and coordination of the admissions process. The Admissions Office assures confidentiality and integrity in the admissions process in adherence with institutional and federal regulations.

ADMISSION TO THE PROGRAM

Applicants must fulfill the following requirements and submit the indicated documents in order to be considered eligible for admission to the Graduate Program in Biomedical Sciences:

- 1. Application form and non-refundable application fee.
- 2. A bachelors degree or its equivalent from an accredited institution of higher education with a minimum grade point average of 2.75 overall and of 3.0 or above in science subjects.
- 3. Official transcripts from each college or university attended for all undergraduate and graduate work.
- 4. Official scores of the Graduate Record Examination (GRE) General Test. The GRE must have been taken within the last 5 years.
- 5. An essay indicating why the student is interested in a graduate degree in biomedical sciences.
- 6. Three letters of recommendation, including at least two from former professors in the student's area of specialization of the last completed degree.
- 7. Interview with the department to which the student is applying or the Graduate Program in Biomedical Sciences Admissions Committee.
- 8. Completion of the following undergraduate courses or its equivalents
 - a) 2 courses in biology
 - b) 2 courses in chemistry
 - c) 2 courses in physics
 - d) 2 courses in mathematics
- 9. Certificate of Penal Antecedents issued by the Police Department of the pertinent state or country.

Recommended Undergraduate Coursework

It is recommended that candidates complete the following coursework at the undergraduate level: calculus I, statistics, general and organic chemistry, general biology, biochemistry, cell biology, molecular biology or genetics, general physics, microbiology, immunology and/or other courses related to the area of specialization.

It is the applicant's responsibility to ensure that the Admissions Office receives all the documentation required, including the completed application form, no later than April 1 or May 1, as late admission for applicants enrolling in the Fall Semester (August). For those applying for the Spring Semester, the deadline will be October 1. The Biochemistry Program does not accept spring applications.

Once admitted to the Program, but before enrolling, the candidate must submit a Health Certificate which includes a physical examination by a licensed physician, TB test or chest X rays, and copies of the following tests: VDRL, urinalysis and a complete blood count (CBC), and a Certificate of

Immunization, if under 21 years old. Federal law requires the submission of a certificate of recent vaccination against the hepatitis B virus.

The student must complete all the admission requirements before the beginning of the incoming semester.

Once the student is admitted to the Program, he/she must pay a non-refundable deposit to assure a place in the Program. This deposit of \$100.00 will be credited to his/her tuition payment.

STUDENT CATEGORIES

Auditing Students

Those students, who wish to audit some courses, may do so if they have the approval of the Chairperson of the Department offering the course(s) and if they register during the registration period. They must also pay the corresponding fees. Auditing students are authorized to participate in all educational activities of the course; however, they will not take course exams or receive a grade. They can take non-graded quizzes, as an evaluation tool.

Special Students

If a candidate does not meet one of the admission requirements he/she may be admitted to the Program as a "special student" after a careful evaluation and recommendation of the department concerned and/or of the Graduate Program in Biomedical Sciences Admissions Committee. The student must comply with the conditions stipulated for admission to be reclassified as a regular student. The student will have an academic year to complete the minimum admission requirements.

Non-degree Students

A non-degree student is a student who attends classes at UCC, but who has not been admitted into the Graduate Programs in Biomedical Sciences. Anyone may take courses as a non-degree student.

Admission Requirements for non-degree students

Non-degree enrollment status does not require a formal admission process or formal entrance requirements. Students must complete an Application for Admissions and pay the non-refundable application fee. Enrollment as a non-degree student does not guarantee regular admission to the University. Students wishing to apply for full admission should refer to the Graduate Programs in Biomedical Sciences admissions requirements.

Tuition and Fees for non-degree students

Non-degree students' enrollment requires tuition and fee assessment at the rate as a regularly enrolled, fully admitted student.

Financial Aid for non-degree students

Non-degree students are not eligible to receive financial aid.

Grade and Transcript Information for non-degree students

Non-degree students are given grades, reviewed according to the University standards of good academic progress, and provided with academic records.

Non-degree registration

Non-degree students must complete a Non-Degree Student Registration Form. This must be completed for each semester that you wish to enroll as a non-degree student. The Associate Dean for Research and Graduate Studies must approve the enrollment.

Transient Students

Students who are enrolled in a graduate program at another university and want to take coursework at UCC and transfer it to their home institution are considered transient students by UCC.

Admission Requirements for Transient Students

Transient students enrollment status does not require a formal admission process or formal entrance requirements. Students must complete an Application for Admissions, pay the non-refundable application fee and submit a letter from their home institution stating that they are in good academic standing and that the home institution will accept the UCC coursework. The Associate Dean for Research and Graduate Studies must approve the enrollment.

TECHNICAL STANDARDS

The Universidad Central del Caribe is committed to full compliance with the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990.

Qualified applicants to the GPBS must be able to complete all requirements leading to the degree. Applicants/graduate students are expected to carry out procedures involved in learning the biomedical sciences including the ability to participate fully in activities dealing with curriculum requirements in the classroom and the laboratory.

In addition to proven academic ability and other relevant personal characteristics, UCC expects its students to possess and be able to demonstrate the skills, attributes, and qualities listed below, without undue dependence on technology or intermediaries to a degree that compromises independent judgment. The use of a trained intermediary is not acceptable in many situations in that it implies that a student's judgment must be mediated by someone else's power of selection and observation.

Degrees from the Graduate Program in Biomedical Sciences imply that the recipient has demonstrated knowledge in the field and the ability to independently apply that knowledge to solve a particular problem by forming hypotheses, designing and conducting experiments, interpreting the experimental results, and communicating the results and their interpretation to the scientific community. Thus, students must demonstrate competence in those intellectual and physical tasks that represent the fundamentals of biomedical research and must possess abilities and skills that allow for observation, intellectual and conceptual reasoning, motor coordination, communication and social interactions.

The Graduate Program in Biomedical Sciences has specified the following technical standards that all students must meet to participate in the graduate education program. Technical Standards are non-academic requirements that are essential for meeting the academic requirements of the program.

The following technical standards will be applied to the selection of students and to students enrolled in the Graduate Program in Biomedical Sciences.

Observation

Observation and information acquisition requires functional visual, auditory and somatic sensation and it is enhanced by the functional use of the sense of smell. The applicant/graduate student must be able to acquire knowledge by direct observation of demonstrations, experiments, and experiences within the laboratory and instructional setting. Examples are physiological or pharmacological responses in animals, studies of microbiological cultures and organisms, identification of normal and abnormal cells or tissues through a microscope, and interpretation of results obtained on various instrumentation. Acquire, assimilate, interpret, integrate, and apply information from direct

observation and oral communication, written messages, films, slides, microscope, imaging science, readouts, and other media.

Intellectual/Conceptual Abilities

The applicant/graduate student must be able to measure, calculate, analyze, reason, integrate, synthesize information to solve problems and comprehend three-dimensional and spatial relationships.

Motor Skills

The applicant/graduate student must possess motor skills necessary to perform procedures required for experimentation and participate actively in all aspects of laboratory experimentation. These skills may include, but are not limited to, surgery in animals, handling of animals, transfer of microorganisms to various mediums, preparing chemical and often toxic materials and solutions, preparation of anatomical specimens for microscopic examination, manipulating electronic and other complex equipment. Such actions require coordination of both gross and fine muscular movements, equilibrium and functional use of the senses of touch and vision.

Communication

Required communication skills include verbal communication, reading, writing and the use of electronic communication devices. The applicant/graduate student must be able to communicate in settings where the time span available for communication is limited. The applicant/graduate student must be able to communicate and discuss his or her experimental hypotheses and results to the scientific community, both in scientific journals or directly at scientific meetings, seminars, or in the laboratory to the research team.

Behavioral and Social Attributes

The applicant/graduate student must posses the emotional and mental health required for full utilization of his or her intellectual abilities, the exercise of good judgment, the prompt completion of responsibilities inherent in managing a scientific laboratory, the ability to function under the stress, and the ability to understand and comply with ethical standards for the conduct of research.

The applicant/graduate student must be able to tolerate physically taxing workloads. They must be able to adapt to changing environments, to display flexibility, and must be able to perform problemsolving tasks quickly and efficiently in an environment that may change rapidly, without warning, and/or in unpredictable ways.

The applicant/graduate student must be capable of developing mature, professional and effective relationships with others. Integrity, interpersonal skills, interest and motivation are all personal qualities that are assessed during the admissions and education processes.

UCC is committed to making its programs accessible to qualified individuals with disabilities. Reasonable accommodations may be provided to qualified individuals with disabilities in order to provide equal educational opportunity. In all circumstances, candidates must be able to meet the academic and technical standards requisite for admission and participation in the GPBS.

STUDENT SERVICES

The Deanship of Admissions and Student Affairs is also responsible for student services.

Counseling Program

A counseling program is available through the Dean for Admissions and Student Affairs.

Student Tutoring Program

This program provides academic tutorial assistance to students identified as academically deficient in coursework.

Lodging Facilities

Lodging facilities are available through individual arrangement in areas adjacent to the University. Information is available in a Directory published by the Office of the Dean for Admissions and Student Affairs.

Student ID Cards

An identification card is issued to all registered students. The ID card must be visible at all times. The card is required for various services.

FINANCIAL AID

Loans

Emergency Loans

This fund was created by donations from Merck, Sharp and Dohme Corp., other institutions and private sponsors. It consists of an amount up to \$500 per semester.

Federal Family Education Loan Program

The Federal Family Education Loan Program (FFELP) is authorized in Part B of Title IV of the Higher Education Act of 1965, as amended on July 23, 1992. Under FFELP, students and their parents can obtain low-cost education loans to help pay for the cost of higher education. FFELP loans are made to students and parents by lenders. To protect the lender from loss in the event of the borrower's death, disability, bankruptcy, or default, the loan is guaranteed by a guarantor. The guarantor is reinsured by the U.S. Department of Education.

Types of loans

There are several types of education loans currently offered by lenders under the FFELP. Contact the Financial Aid Office for updated information.

REGISTRAR'S OFFICE

The Registrar's Office is responsible for the registration of students, for the filing of the student's academic record and for the preparation and/or remittance of transcriptions and certificates dealing with the fulfillment of the requirements for the degrees conferred by the University.

At the end of each semester, the Registrar's Office will mail course grades. Students who do not receive their grades by the beginning of the next term should notify the Registrar's Office.

Official transcripts and other certified documents would be sent directly to the concerned college, university, industrial firm, or other parties upon payment of the corresponding fee. Students may obtain non-official copies of their academic record upon payment of the corresponding fee.

Students, who consider that there are errors in their transcripts, shall communicate those concerns to the Registrar's Office within 30 days after receipt of the document in question.

Registration

All students must register according to the time schedule prepared by the Registrar's Office. A student who satisfies all admission requirements and is admitted to the Program becomes a regular student. Failure to obtain a grade index of at least 2.5 during the first calendar year automatically drops the student from the Program. A student with a grade index above 2.5 but below 3.0 will be on probation for the next academic year, at the end of which he/she will be dismissed if his/her grade index is not 3.0 or better.

No one may be enrolled as a regular or special degree-seeking student in the Graduate Program in Biomedical Sciences without the approval of the Associate Dean for Research and Graduate Studies.

Diplomas

The diplomas will be distributed by the Registrar's Office. All claims pertaining to the diplomas should be made no later than one year after the commencement date.

Change in Address

All changes in address should be registered with the Registrar's Office. Otherwise, the Registrar's Office will not be responsible for the student not receiving pertinent information from the University.

TUITION AND FEES

Payments of tuition and other fees are due at the time of registration, unless otherwise indicated pursuant to the Rules and Regulations of the University dealing with postponement of payment of tuition and other fees.

Admission, with application Late admission Readmission, with application Seat Reservation upon admittance	 \$ 50.00 non-refundable \$ 150.00 non-refundable \$ 50.00 non-refundable \$ 100.00 non-refundable
Tuition	•
Regular students, per credit Auditing students	\$ 335.00 \$ 200.00

The policy for reimbursement of tuition fees is determined by the Office of Financial Resources. Please refer to the appropriate manual.

\$ 225.00 per exam

GRADING POLICY

Grades at the end of each term are assigned according to the following letter system:

Grade	Points	
А	4	Excellent
В	3	Good
С	2	Satisfactory
F	0	Failure
1		Incomplete coursework
Ν		Non reported
W		Authorized withdrawal
U		Unauthorized withdrawal
WP		Withdrawal passing
WF		Withdrawal failing
Р		Passed without credit*
Н		Passed with honors
NC		Noncredit course
IP		In Progress

*Each department may propose through the Graduate Program in Biomedical Sciences Committee graduate courses for pass/fail (P/F) designation.

A grade of "I" indicates assigned work yet to be completed in the term. The grade of "I" becomes an "F" if not removed by the end of the following term according to the following schedule: "I" grades from the first semester become "F" if not removed by the end of the second semester; "I" grades from the second semester and for the summer session become "F" if not removed by the end of the first semester of the incoming academic year. An "I" grade cannot be changed to a W under any circumstances. The grade of "I" on the thesis does not become an "F" at the beginning of the next term or session and will remain as such until the evaluation of the thesis is submitted.

Academic Honors

Academic honor will be given to those students who have obtained the following cumulative averages, after completing the Program's requirements.

HONOR	CQPI
Summa Cum Laude	3.75 to 4.00
Magna Cum Laude	3.50 to 3.74
Cum Laude	3.25 to 3.49

Formal Grade Appeal Procedure

The student must initiate formal grade appeals by the end of the eighth week of the semester following the award of the grade. The instructor may change a grade if it is found that there was an error. Except for changes made by the instructor, grades shall not be changed except through the appeal process.

Normally, any differences of opinion between an instructor and student concerning a grade should be resolved between the individuals involved. If the instructor of record will not be available within one semester, the department chair or designee may act in lieu of the instructor of record for the purpose of grade appeals. If the instructor and student cannot resolve their differences of opinion, the student must present a **written brief** outlining the problem and the area of disagreement to the department chair. After notification by the department chair that a grade appeal brief has been filed, the instructor must respond to the department chair in writing within **ten working days**. The department chair or designee will attempt to serve as mediator working with the individuals to resolve the dispute. If this mediation proves unsuccessful, the department chair shall forward the student's brief to the Office of Associate Dean for Research and Graduate Studies (OADRGS).

The OADRGS or designee will review the findings to date and will attempt to act as a mediator in resolving the dispute. If mediation does not lead to resolution, then the OADRGS shall form a Grade Appeal Committee within **ten working days**. This committee shall include three faculty members: one selected by the instructor of record, one by the student appealing the grade, and one by the Dean of Academic Affairs.

The committee shall elect its own chair. A simple majority shall prevail in the committee.

All pertinent data, papers, records, etc., together with written briefs, will be submitted to this Committee for study. Both student and instructor will have permission to view, but not copy, all materials used by the Committee. The Committee may meet individually or collectively with those involved in its quest for determination, and the Committee may choose to continue mediation efforts. Each party may bring another person with them as support or spokesperson at any stage in the process. The student or instructor has the option of meeting with the Committee without the other party present.

The function of the Grade Appeal Committee shall be to evaluate the grading procedures as well as to, if necessary, re-evaluate the student's assignments for the course in terms of criteria established by the instructor of the course. The Committee's decision may be to keep the assigned grade, or to raise the assigned grade.

The Committee shall provide a written justification to the OADRGS for its decision. The OADRGS shall inform the student and the instructor of the Committee's ruling and provide both parties with copies of the Committee report.

In the case of a change of grade, if the instructor of record does not implement the change of grade decided upon by the Committee, the OADRGS shall implement the change of grade on the student's official transcript through the ordinary change of grade procedure. This shall be the last step in the deliberation of the formal grade appeal.

STUDENT STATUS IN THE PROGRAM

The Graduate Program in Biomedical Sciences Committee will review students' records in May, for those students admitted in August of the previous year, and in December for students admitted in January (completion of two semesters in the program).

The resulting action depends upon the grade point average (GPA) on a four-point scale, as follows:

- 1. To be in good academic standing, the student must have a GPA of 3.0 or higher.
- 2. Students attaining a GPA below 2.5 will be dismissed from the Program.
- 3. If the grade index is below 3.0 but above 2.5, the student will be placed on probation for the following academic year, at the end of which he/she will be dismissed if his/her grade index has not improved to 3.0. Students on probation are not eligible for financial aid.
- 4. Students obtaining a failing grade (F) on a course will be dismissed from the program.
- 5. A student may repeat a course once, after withdrawing. The student must retake the course the next time that is offered. If the student does not approve the course during his/her second attempt the student will be dismissed from the program.

A student that has been dismissed from the Program may appeal their cases to the Graduate Program in Biomedical Sciences Committee. The Committee will review the student's record and will make the pertinent decision on whether to readmit the student. Once dismissed from the program a student will not enroll in graduate courses under any student classification, for example non-degree student.

All grades and repeats will be included in the calculation of the grade point average (GPA). All grades on courses not offered at the institution but approved by the Thesis Committee as part of the program of study will also be included in the GPA calculation. Withdrawals, pass/fail credit and transfer courses are not included in the calculation of the GPA. Transferred courses are defined as those completed while not enrolled at UCC.

Grade reports are sent to students at the end of each semester.

A certified letter is mailed to each student placed on probation or dismissed.

WITHDRAWAL PROCEDURES

- 1. The deadline for withdrawal from a course with a grade of "W" may be any date prior to 50% to completion of the course, afterwards the student will be assigned a grade of WF or WP (if evaluated).
- 2. The deadline for withdrawal without "W" will be before 10% after the beginning of the course.
- 3. The procedure for withdrawal is as follows: the student must provide written notification to the graduate program coordinator of the program he/she is enrolled in advising what course(s) he/she intends to withdraw. The student should file the withdrawal application at the Registrar's Office.
- 4. Authorized withdrawals will be allowed before the course final exam.
- 5. Unauthorized withdrawals constitute grounds for dismissal from the Program.

READMISSIONS

Students who have previously been enrolled in the Program and withdrawal without authorization, withdrawal with authorization or have not maintained their active status in the Program and desire to continue or complete the degree requirements must apply for readmission to the Program through the Office of Admissions. All readmission applications must be received 30 calendar days before the start of the session in which the student wants to continue his/her studies. Interested candidates must submit transcripts of any other coursework taken outside UCC during the time of absence from the Program.

The maximum interruption allowed in the program of study is two years and only one readmission will be granted to the student.

TRANSFERS

Transfer Students

Students who desire admission into the Graduate Program in Biomedical Sciences as transfer students from another graduate program of an accredited institution will be considered for admission if they fulfill all admission requirements. The applicants must request that the institution from which they wish to transfer submit all pertinent documentation. The Graduate Program in Biomedical Sciences Committee will evaluate the student academic record and will recommend to the Registrar's office the transfer of coursework as follows:

Transfer of graduate credit hours will be accepted for the Ph.D. degree provided the grades in those courses transferred are of a B or higher and the courses are equivalent in content and depth to those offered by the UCC Graduate Program in Biomedical Sciences.

A maximum of 9 credits hours of approved coursework will be accepted for the MS/MA degree, provided the grades in those courses are B or better, the courses are equivalent to those offered by the Graduate Program in Biomedical Sciences, and they satisfy departmental requirements.

Transfer courses at the graduate level must have been taken within the past five years.

Students in the Program who are authorized to take courses outside of UCC must submit transcripts of any coursework taken to be included in their UCC transcript.

No credits used for a completion of a BS or PhD degree will be transferred.

Transfer of Credits

Transfer of graduate credit hours will be accepted for the Ph.D. degree provided the grades in those courses transferred are B or higher and the courses are equivalent in content and depth to those offered by the UCC Graduate Program in Biomedical Sciences.

A maximum of 9 credits hours of approved coursework will be accepted for the MS/MA degree, provided the grades in those courses are B or better, the courses are equivalent to those offered by the Graduate Program in Biomedical Sciences.

All transfer credits must be verified by an official transcript from the institution at which the work was completed.

All credits transferred to UCC must have been completed at an accredited institution.

Acceptance of graduate credit for work done at other graduate institution must be approved by the student's advisory committee and the Associate Dean of Graduate Studies. Courses to be considered for transfer credit must have been completed within five years.

Valid transfer credits will appear on the student's transcript as credits earned.

Under no circumstances will transfer credit be awarded for courses in which a grade lower than B, or its equivalent, has been received or for courses graded on a pass/fail basis, for continuing education units, courses completed outside the five-year time limit, correspondence, extension, or in-service courses.

Procedure:

To have courses considered for transfer, students must discuss their plan to use specific courses from other institutions with their major advisor and/or advisory committee. Students will complete GPBSF 18 to request approval.

Within the guidelines established by the Graduate Program in Biomedical Sciences, the advisory committee will identify courses acceptable for transfer and will record these courses on the student's Program of Study, GPBSF 1.

The student must have an official transcript sent from the institution(s) where credit was earned to the UCC Registrar's Office. Only when courses have been verified by the OADRGS will they be approved for application toward the degree.

Under no circumstances will transfer credit be awarded for research, internships, master's thesis or doctoral dissertation work performed outside of UCC. While, at the discretion of a program faculty, a student's research project from another institution might be accepted for continuation once enrolled at UCC, the required number of credit hours must be enrolled in and successfully completed to meet the requirements for graduation with a master's or a doctorate degree, respectively.

Transfer between Programs

Students may transfer between the PhD and MS/MA programs or between MS/MA programs. The student must complete the reclassification document in the Registrar's Office and pay the reclassification fee. The student must also complete Graduate Programs in Biomedical Sciences Form 8. The signature of the loosing department chair is not required, but performed as a courtesy. In case the losing department chair does not agree with the transfer, the Associate Dean for Research and Graduate Studies can approve the transfer of the student.

Students transferring from the MS to the MA may transfer up to 3 credits of research. For the credits to be transferred the student must have presented the research at a scientific meeting, write a report about the research performed and have the approval of the research mentor.

Once a student has transferred from a PhD program to a MS/MA program, the MS/MA must be completed before the student is allowed to request admission into a PhD program.

LEAVES OF ABSENCE

Students who wish or need to interrupt their study temporarily may request a leave of absence (LOA). There are three types of leave: personal, medical, and parental. Students will complete the request form at the Registrar's Office. The general policies that apply to all types of leave are:

All leaves of absence must be approved by the Associate Dean for Research and Graduate Studies on the recommendation of the mentor. Medical leaves also require the recommendation of a physician, as described below; see Medical Leave of Absence.

Students in the Program may be granted a leave for a maximum of one academic year. The expected last date of registration will be adjusted by one semester for each semester of the leave. In exceptional circumstances, a maximum total of two years of leave may be granted for students in the Program. Students who fail to register for the term following the end of the approved leave will be considered to have withdrawn from the Graduate Program in Biomedical Sciences.

Students may be granted more than one leave of absence as long as the total amount of time does not exceed two academic years (Students may take four leaves of absence in four different semesters).

If a leave of absence is approved, the time limit for completing the degree will not be extended.

Students on leave may complete, by the appropriate deadline for the term in which the course was taken, outstanding work in courses for which they have been granted approved incompletes. They may not, however, fulfill any other degree requirements during the time on leave. Students who intend to work toward the degree while away from the University must request registration in absentia. Students who in fact make progress toward the degree while on leave will have their registration changed retroactively to in absentia for the period of the leave.

Students on leave of absence do not have to file a formal application for readmission. However, they must notify the Graduate Program in Biomedical Sciences Office in writing of their intention to return. Such notification should be given at least six weeks prior to the end of the approved leave.

Personal Leave of Absence

A student who is current with his or her degree requirements and who wishes to interrupt study temporarily may request a personal leave of absence. The general policies governing leaves of absence are described above. Students are eligible for personal leaves after satisfactory completion of at least one year of study.

To request a personal leave of absence, the student must write to the Associate Dean for Research and Graduate Studies explaining the reasons for the proposed leave and stating both the proposed start and end dates of the leave and the address at which the student can be reached during the period of the leave. If the Associate Dean finds the student to be eligible, the leave will be granted. In any case the student will be informed in writing of the action taken. Students who do not apply for a leave of absence, or who apply for a leave but are not granted one, and who do not register for any term, will be considered to have withdrawn from the Graduate Program in Biomedical Sciences.

Students on a personal leave of absence are not eligible for financial aid, including loans, or for the use of University facilities normally available to registered students. Students granted a personal leave may continue to be enrolled in the UCC health plan by purchasing coverage.

Medical Leave of Absence

A student who must interrupt study temporarily because of illness or injury may be granted a medical leave of absence with the approval of the Associate Dean for Research and Graduate Studies, on the written recommendation of a physician. Final decisions concerning requests for medical leaves will be communicated to students in writing.

The Graduate Program in Biomedical Sciences (GPBS) reserves the right to place a student on a medical leave of absence when, on the recommendation of the Dean of Student Affairs, the GPBS determines that the student is a danger to self or others because of a serious medical problem. A student who is making satisfactory progress toward his/her degree requirements is eligible for a medical leave any time after matriculation. Before re-registering, a student on medical leave must secure written permission to return from a physician.

Students on medical leave of absence are not eligible for financial aid, including loans, or for the use of University facilities normally available to registered students.

Family Leave of Absence

A student who is making satisfactory progress toward his/her degree requirements and wishes to, or must, interrupt study temporarily for reasons of pregnancy, maternity or paternity care, or care for a family member, may be granted a family leave of absence. Any student planning to have or care for a child is encouraged to meet with the Associate Dean for Research and Graduate Studies to discuss leaves and other short-term arrangements. For many students short-term arrangements, rather than a leave of absence, are possible. A student who is making satisfactory progress toward his/her degree requirements is eligible for a leave of absence for parental responsibilities any time after matriculation.

Students on leave of absence for parental responsibilities are not eligible for financial aid, including loans, or for the use of University facilities normally available to registered students.

STUDY PROGRAMS IN THE BIOMEDICAL SCIENCES

The Graduate Program in Biomedical Sciences offers four different study programs:

1. Doctor of Philosophy in Cellular and Molecular Biology

Research Interest Anatomy Cellular and Molecular Biology Biochemistry Microbiology and Immunology Neurosciences Physiology

2. Doctor of Philosophy in Neurosciences

3. Master of Science (MS) degree in:

Anatomy and Cell Biology Biochemistry Microbiology and Immunology Neurosciences Pharmacology Physiology

4. Master of Arts (MA) degree in: Anatomy and Cell Biology Biomedical Sciences

GRADUATES' COMPETENCES

Anatomy and Cell Biology

Ph.D. Program in Cell and Molecular Biology Research interest in Anatomy

- 1. Summarize the basic structures and fundamental processes of life at a molecular and cellular level.
- 2. Assess and recommend knowledge of related science specialties relevant to anatomy research projects.
- 3. Devise a scientific project applying knowledge in cell and molecular biology and anatomy.
- 4. Evaluate the scientific literature in cell and molecular biology and anatomy to generate hypothesis and design scientific projects.
- 5. Assess contemporary techniques used within cell and molecular biology and anatomy to determine which will best generate the necessary data to test a hypothesis.
- 6. Consider current technology and scientific methodologies for problem solving.
- 7. Design an experiment to test a hypothesis.
- 8. Support and articulate an idea or thought with an advanced degree of clarity and precision through written and oral means.
- 9. Monitor and compile the scientific literature required for professional development throughout the career.
- 10. Compile, organize, and assess scientific data need to compose research articles and design experiments.
- 11. Evaluate scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Compose research articles and disseminates research results according to professional standards.
- 13. Consider the correct professional attitude to utilize when interacting with individuals of diverse cultures, races, and genders in the development of scientific projects adjusting to the cultural needs and background of the individual.
- 14. Recommend professional attitudes, standards, and manners in the behavior towards peers, institutional staff, and faculty adjusting to the cultural needs and background of the individual.

M.A./M.S. Program in Biomedical Sciences Specialization in Anatomy and Cell Biology

- 1. Demonstrate a general knowledge of the principal areas of anatomy: macroscopic anatomy, histology, embryology, and neuroanatomy.
- 2. Demonstrate a general knowledge of biochemistry and cell biology.
- 3. Apply knowledge in anatomy and cell biology to the development of scientific projects (M.S.).
- 4. Interpret the scientific literature to support hypothesis and project development (M.S.).
- 5. Apply the contemporary techniques used within the area of research (M.S.).
- 6. Apply current technology and scientific methodologies for problem solving (M.S.).
- 7. Conduct an experiment to test a hypothesis (M.S.).
- 8. Demonstrate the necessary written and oral skills to effectively articulate an idea or thought.
- 9. Demonstrate the use of scientific literature required to continue their professional development throughout their career.
- 10. Demonstrate the required professional skills to collect, organize, and analyze scientific data.
- 11. Use scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Apply professional standards related to the publication and dissemination of research results.
- 13. Demonstrate a professional attitude when interacting with individuals of diverse cultures, races, and genders.
- 14. Demonstrate a professional attitude and manners in the behavior towards their peers, institutional staff, and faculty.

Biochemistry

Ph.D. Program in Cell and Molecular Biology Research interest in Biochemistry

- 1. Summarize the basic structures and fundamental processes of life at a molecular and cellular level.
- 2. Assess and recommend knowledge of related science specialties (chemistry for example) relevant to biochemistry research projects.
- 3. Devise a scientific project applying knowledge in cell and molecular biology and biochemistry.
- 4. Evaluate the scientific literature in cell and molecular biology and biochemistry to generate hypothesis and design scientific projects.
- 5. Assess contemporary techniques used within cell and molecular biology and biochemistry to determine which will best generate the necessary data to test a hypothesis.
- 6. Consider current technology and scientific methodologies for problem solving.
- 7. Design an experiment to test a hypothesis.
- 8. Support and articulate an idea or thought with an advanced degree of clarity and precision through written and oral means.
- 9. Monitor and compile the scientific literature required for professional development throughout the career.
- 10. Compile, organize, and assess scientific data need to compose research articles and design experiments.
- 11. Evaluate scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Compose research articles and disseminates research results according to professional standards.
- 13. Consider the correct professional attitude to utilize when interacting with individuals of diverse cultures, races, and genders in the development of scientific projects adjusting to the cultural needs and background of the individual.
- 14. Recommend professional attitudes, standards, and manners in the behavior towards peers, institutional staff, and faculty adjusting to the cultural needs and background of the individual.

M.S. Program in Biomedical Sciences Specialization in Biochemistry

- 1. Demonstrate a general knowledge of biochemistry and cell and molecular biology.
- 2. Apply knowledge in biochemistry to the development of scientific projects.
- 3. Interpret the scientific literature to support hypothesis and project development.
- 4. Apply the contemporary techniques used within the area of research.
- 5. Apply current technology and scientific methodologies for problem solving.
- 6. Conduct an experiment to test a hypothesis.
- 7. Demonstrate the necessary written and oral skills to effectively articulate an idea or thought.
- 8. Demonstrate the use of scientific literature required to continue their professional development throughout their career.
- 9. Demonstrate the required professional skills to collect, organize, and analyze scientific data.
- 10. Use scientific information including primary research articles, mass media sources, and World Wide Web information.
- 11. Apply professional standards related to the publication and dissemination of research results.
- 12. Demonstrate a professional attitude when interacting with individuals of diverse cultures, races, and genders.
- 13. Demonstrate a professional attitude and manners in the behavior towards their peers, institutional staff, and faculty.

Microbiology and Immunology

Ph.D. Program in Cell and Molecular Biology Research interest in Microbiology and Immunology

- 1. Summarize the basic structures and fundamental processes of life at a molecular and cellular level.
- 2. Assess and recommend knowledge of related science specialties (chemistry for example) relevant to microbiology and immunology research projects.
- 3. Devise a scientific project applying knowledge in cell and molecular biology and microbiology and immunology.
- 4. Evaluate the scientific literature in cell and molecular biology and microbiology and immunology to generate hypothesis and design scientific projects.
- 5. Assess contemporary techniques used within cell and molecular biology and microbiology and immunology to determine which will best generate the necessary data to test a hypothesis.
- 6. Consider current technology and scientific methodologies for problem solving.
- 7. Design an experiment to test a hypothesis.
- 8. Support and articulate an idea or thought with an advanced degree of clarity and precision through written and oral means.
- 9. Monitor and compile the scientific literature required for professional development throughout the career.
- 10. Compile, organize, and assess scientific data need to compose research articles and design experiments.
- 11. Evaluate scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Compose research articles and disseminates research results according to professional standards.
- 13. Consider the correct professional attitude to utilize when interacting with individuals of diverse cultures, races, and genders in the development of scientific projects adjusting to the cultural needs and background of the individual.
- 14. Recommend professional attitudes, standards and manners in the behavior towards peers, institutional staff, and faculty adjusting to the cultural needs and background of the individual.

M.S. Program in Biomedical Sciences Specialization in Microbiology and Immunology

- 1. Demonstrate a general knowledge of the principal areas of microbiology and immunology: bacteriology, mycology, parasitology, virology and immunology.
- 2. Demonstrate a general knowledge of biochemistry and cell biology.
- 3. Apply knowledge in microbiology and immunology to the development of scientific projects (M.S.).
- 4. Interpret the scientific literature to support hypothesis and project development (M.S.).
- 5. Apply the contemporary techniques used within the area of research (M.S.).
- 6. Apply current technology and scientific methodologies for problem solving (M.S.).
- 7. Conduct an experiment to test a hypothesis (M.S.).
- 8. Demonstrate the necessary written and oral skills to effectively articulate an idea or thought.
- 9. Demonstrate the use of scientific literature required to continue their professional development throughout their career.
- 10. Demonstrate the required professional skills to collect, organize, and analyze scientific data.
- 11. Use scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Apply professional standards related to the publication and dissemination of research results.
- 13. Demonstrate a professional attitude when interacting with individuals of diverse cultures, races, and genders.
- 14. Demonstrate a professional attitude and manners in the behavior towards their peers, institutional staff, and faculty.

Neurosciences

Ph.D. Program in Cell and Molecular Biology Research interest in Neurosciences

- 1. Summarize the basic structures and fundamental processes of life at a molecular and cellular level.
- 2. Assess and recommend knowledge of related science specialties (chemistry for example) relevant to neuroscience research projects.
- 3. Devise a scientific project applying knowledge in cell and molecular biology and neuroscience.
- 4. Evaluate the scientific literature in cell and molecular biology and neuroscience to generate hypothesis and design scientific projects.
- 5. Assess contemporary techniques used within cell and molecular biology and neuroscience to determine which will best generate the necessary data to test a hypothesis.
- 6. Consider current technology and scientific methodologies for problem solving.
- 7. Design an experiment to test a hypothesis.
- 8. Support and articulate an idea or thought with an advanced degree of clarity and precision through written and oral means.
- 9. Monitor and compile the scientific literature required for professional development throughout the career.
- 10. Compile, organize, and assess scientific data need to compose research articles and design experiments.
- 11. Evaluate scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Compose research articles and disseminates research results according to professional standards.
- 13. Consider the correct professional attitude to utilize when interacting with individuals of diverse cultures, races, and genders in the development of scientific projects adjusting to the cultural needs and background of the individual.
- 14. Recommend professional attitudes, standards and manners in the behavior towards peers, institutional staff, and faculty adjusting to the cultural needs and background of the individual.

Ph.D. in Neurosciences

- 1. Summarize the basic structures and fundamental processes of the nervous system.
- 2. Assess and recommend knowledge of related science specialties (chemistry for example) relevant to neuroscience research projects.
- 3. Devise a scientific project applying knowledge in neuroscience.
- 4. Evaluate the scientific literature in neuroscience to generate hypothesis and design scientific projects.
- 5. Assess contemporary techniques used within neuroscience to determine which will best generate the necessary data to test a hypothesis.
- 6. Consider current technology and scientific methodologies for problem solving.
- 7. Design an experiment to test a hypothesis.
- 8. Support and articulate an idea or thought with an advanced degree of clarity and precision through written and oral means.
- 9. Monitor and compile the scientific literature required for professional development throughout the career.
- 10. Compile, organize, and assess scientific data need to compose research articles and design experiments.
- 11. Evaluate scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Compose research articles and disseminates research results according to professional standards.
- 13. Consider the correct professional attitude to utilize when interacting with individuals of diverse cultures, races, and genders in the development of scientific projects adjusting to the cultural needs and background of the individual.
- 14. Recommend professional attitudes, standards and manners in the behavior towards peers, institutional staff, and faculty adjusting to the cultural needs and background of the individual.

M.S. in Neurosciences

- 1. Demonstrate a general knowledge of the principals areas of Neuroscience
- 2. Demonstrate a general knowledge of biochemistry and cell and molecular biology.
- 3. Apply knowledge in neuroscience to the development of scientific projects.
- 4. Interpret the scientific literature to support hypothesis and project development.
- 5. Apply the contemporary techniques used within the area of research.
- 6. Apply current technology and scientific methodologies for problem solving.
- 7. Conduct an experiment to test a hypothesis.
- 8. Demonstrate the necessary written and oral skills to effectively articulate an idea or thought.
- 9. Demonstrate the use of scientific literature required to continue their professional development throughout their career.
- 10. Demonstrate the required professional skills to collect, organize, and analyze scientific data.
- 11. Use scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Apply professional standards related to the publication and dissemination of research results.
- 13. Demonstrate a professional attitude when interacting with individuals of diverse cultures, races, and genders.
- 14. Demonstrate a professional attitude and manners in the behavior towards their peers, institutional staff, and faculty.

Physiology

Ph.D. Program in Cell and Molecular Biology Research interest in Physiology

- 1. Summarize the basic structures and fundamental processes of life at a molecular and cellular level.
- 2. Assess and recommend knowledge of related science specialties (chemistry for example) relevant to physiology research projects.
- 3. Devise a scientific project applying knowledge in cell and molecular biology and physiology.
- 4. Evaluate the scientific literature in cell and molecular biology and physiology to generate hypothesis and design scientific projects.
- 5. Assess contemporary techniques used within cell and molecular biology and physiology to determine which will best generate the necessary data to test a hypothesis.
- 6. Consider current technology and scientific methodologies for problem solving.
- 7. Design an experiment to test a hypothesis.
- 8. Support and articulate an idea or thought with an advanced degree of clarity and precision through written and oral means.
- 9. Monitor and compile the scientific literature required for professional development throughout the career.
- 10. Compile, organize, and assess scientific data need to compose research articles and design experiments.
- 11. Evaluate scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Compose research articles and disseminates research results according to professional standards.
- 13. Consider the correct professional attitude to utilize when interacting with individuals of diverse cultures, races, and genders in the development of scientific projects adjusting to the cultural needs and background of the individual.
- 14. Recommend professional attitudes, standards and manners in the behavior towards peers, institutional staff, and faculty adjusting to the cultural needs and background of the individual.

M.S. Program in Biomedical Sciences Specialization in Physiology

- 1. Demonstrate a general knowledge of the principal areas of Physiology: cardiopulmonary, endocrine, gastrointestinal, neuromuscular, renal reproductive and reticuloendothelial physiology.
- 2. Demonstrate a general knowledge of biochemistry and cell biology.
- 3. Apply knowledge in physiology to the development of scientific projects (M.S.).
- 4. Interpret the scientific literature to support hypothesis and project development (M.S.).
- 5. Apply the contemporary techniques used within the area of research (M.S.).
- 6. Apply current technology and scientific methodologies for problem solving (M.S.).
- 7. Conduct an experiment to test a hypothesis (M.S.).
- 8. Demonstrate the necessary written and oral skills to effectively articulate an idea or thought.
- 9. Demonstrate the use of scientific literature required to continue their professional development throughout their career.
- 10. Demonstrate the required professional skills to collect, organize, and analyze scientific data.
- 11. Use scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Apply professional standards related to the publication and dissemination of research results.
- 13. Demonstrate a professional attitude when interacting with individuals of diverse cultures, races, and genders.
- 14. Demonstrate a professional attitude and manners in the behavior towards their peers, institutional staff, and faculty.
Pharmacology

M.S. Program in Biomedical Sciences Specialization in Pharmacology

Graduates will be able to:

- 1. Demonstrate a general knowledge of pharmacology.
- 2. Demonstrate a general knowledge of biochemistry and cell biology.
- 3. Apply knowledge in pharmacology to the development of scientific projects.
- 4. Interpret the scientific literature to support hypothesis and project development.
- 5. Apply the contemporary techniques used within the area of research.
- 6. Apply current technology and scientific methodologies for problem solving.
- 7. Conduct an experiment to test a hypothesis.
- 8. Demonstrate the necessary written and oral skills to effectively articulate an idea or thought.
- 9. Demonstrate the use of scientific literature required to continue their professional development throughout their career.
- 10. Demonstrate the required professional skills to collect, organize, and analyze scientific data.
- 11. Use scientific information including primary research articles, mass media sources, and World Wide Web information.
- 12. Apply professional standards related to the publication and dissemination of research results.
- 13. Demonstrate a professional attitude when interacting with individuals of diverse cultures, races, and genders.
- 14. Demonstrate a professional attitude and manners in the behavior towards their peers, institutional staff, and faculty.

GRADUATION REQUIREMENTS

A MS/MA or PhD student must complete all the requirements and have turned in the final version of his/hers thesis/dissertation in order to participate in the Commencement Ceremony.

Student must remain enrolled until completing all graduation requirements and delivering the final version of their thesis / dissertation.

Ph.D. Degree

Early in the doctoral work, a dissertation subject is chosen in the major field of study and approved by the dissertation committee. The dissertation must represent original investigation that contributes new knowledge to the candidate's field. Upon completion of at least four (4) years of graduate study and a dissertation, the candidate must pass a dissertation defense.

- a. Grade index: 3.0 or above
- b. Credits As stipulated by the program of study, 72 credits minimum.
- c. Residence: A minimum of 36 credits must be completed at UCC.
- d. Time limitations: A maximum of 7 years to satisfy all the requirements.
- e. Candidacy examination: Required of all students
- f. Dissertation defense: Required of all students
- g. Authorship: First author in at least one (1) manuscript or co-author in at least two (2) manuscripts accepted for publication in a peer-reviewed journal, which incorporates work that was performed by the student and is included in the student's dissertation. Brief / short communications do not necessarily meet this requirement. The dissertation committee must approve brief / short communications.

MS/MA Degree

- a. Grade index: 3.0 or above
- b. Credits: As stipulated by the program of study, 34 credits minimum.
- c. Residence: A minimum of two year of full-time work must be completed at UCC
- d. Time limitations: A maximum of 4 years to complete all the requirements
- e. Comprehensive examination Required of all MS and MA candidates
- f. Thesis defense: Required of all MS candidates

The student must deliver the approved dissertation/thesis in a CD-ROM or flash drive, according to the Dissertation/Thesis Manual, to complete the graduation requirements and receive his/hers diploma. The Graduate Programs in Biomedical Sciences will print and bind three (3) copies of the thesis (one for the student, one for the department and one for the library).

UNIVERSIDAD CENTRAL DEL CARIBE Graduate Program in Biomedical Sciences Office GPBSF 24

Time Limitations

Ph.D. Degree

Students will be allowed a maximum of seven years to complete the degree requirements.

MS/MA Degree

Students will be allowed a maximum of four years to complete the degree requirements.

The student must complete all requirements by June 30 of his forth year, the last day of the academic year. Under exceptional circumstances, the Graduate Program in Biomedical Sciences Committee may extend these periods for one (1) year.

Extension Request Procedure

The student will write a letter explaining the need for the extended period and the reasons why he/she could not complete the degree in the allowed time. The mentor will write a letter agreeing to continue being the mentor of the student and detailing a plan for the student to complete the graduation requirements in a year period. The Graduate Program in Biomedical Sciences Committee will examine the documents presented and render a decision.

PROGRAM ACADEMIC REQUIREMENTS

Academic Program Advice

The Coordinator for the Graduate Program in Biomedical Sciences in each department will be responsible for the academic advice to the graduate students in his/her department. The mentor or graduate program coordinator will prepare the student's program of study. The Coordinator will help the student in attaining his/her educational goals. To this end, the Coordinator will participate in the preparation, supervision and evaluation of the student's academic program.

Language Requirements

Knowledge of English and Spanish is a basic requirement for study in the Program. The student is expected to possess verbal and written proficiency in both languages. Student's language abilities will be assessed during the interview. If a student is not able to participate in the interview in person, (s)he must include an official report of their Test of English as a Foreign Language (TOEFL) scores with their application.

Seminars, bibliographic reports, dissertation/thesis, proposal defenses and candidacy exams will be in English.

Graduation

Students must apply and pay the corresponding graduation fee no later than the date set in the Academic Calendar. Application forms for this purpose are obtained from the Registrar's Office, and must be mailed or delivered together with a copy of the receipt of payment of the \$200.00 non-refundable graduation fee to the Bursar's Office. Non compliance with these requirements may postpone the conferring of the degree.

Maintenance of Active Status

PhD Degree

Students are required to enroll in a minimum of eighteen (18) credits each year in order to maintain an active status in the Program for a period not exceeding the time allowed for the completion of the degree.

MS/MA Degree

Students that have fulfilled all the requirements for the Masters degree except for the Thesis Defense are required to enroll in BMS 899 for zero (0) credits each each semester in order to maintain an active status in the Program for a period not exceeding the remainder of the time allowed for the completion of the degree, four years.

Programs of Study

The program of study must be filed with the Graduate Program in Biomedical Sciences Office. Students may enroll in the courses they understand are relevant to their degree, with the approval of their mentor, within the time limit to complete the program. These programs of study are designed to meet the specific requirements of each student. Once the designated program of study is approved, a student must comply with the course requirements established in his/her program of study to graduate.

Residency

A student must complete a minimum of 36 UCC credits.

Research Mentor

Students must select a mentor by the end of the first year. The mentor will be the chair of the Thesis / Dissertation Committee and will be selected by the student. The mentor must have a Doctoral degree and must be actively engaged in research in the case of Ph.D. and M.S. students. The mentor will be responsible for direct supervision of the student's research and will coordinate the comprehensive / candidacy exam. The mentor must hold or request an academic appointment at UCC.

MA Mentor

Students must select a mentor by the end of the first year. The mentor will be in charge of organizing evaluation committees for the student's biographical reports according to the reports discipline. The mentor will be selected by the student with the advice of the chairperson of the department. The mentor will be responsible for direct supervision of the student's academic work and will coordinate the comprehensive exam. The mentor must hold or request an academic appointment at UCC.

Dissertation / Thesis Committee

After selecting their research advisor, the student, in consultation with the advisor, will select a committee no later than the first semester of the second academic year. The committee will be composed of three (3) or five (5) members, including the research advisor who will chair the committee. The members of the committee will be UCC faculty members or faculty from other institutions with similar programs, but the majority of the committee must be UCC full-time faculty members. One (1) member of the committee must be a graduate faculty member from outside the advisor's department. The advisor will keep written records of the meetings. The committee and the program of study must be approved by the Graduate Program in Biomedical Sciences Office and should be on file at that Office by the end of the first semester of the second year.

An intensive period of full-time research is the central element of the Ph.D. / M.S. degree. It is the dissertation committee's responsibility to provide an objective evaluation of the project as well as contribute to the selection of specific research directions. While the dissertation committee often has useful suggestions on specific approaches to a particular protocol, a more vital function is to help focus and limit the scope of the research so that the student has, as early as possible, a clear concept of the overall design of the dissertation proposal. Although this concept will change in response to specific experimental findings, it is critical for the student to be guided to define, both in scope and quality, an appropriate research project.

The committee must meet at least once per academic year.

Bibliographical Reports

For those students enrolled in the M.A. Program in the Biomedical Sciences, the Associate Dean for Research and Graduate Studies together with the student will select the Bibliographical Reports and his/her mentor.

Seminars

The seminars provide coverage of subjects not included in other graduate courses and serves as a forum for presentation of research proposals, work in progress and completed work by the staff and graduate students. Visiting scientists also participate in the seminars.

Each seminar will be worth 1 credit hour. All faculty members present during the seminar may evaluate the student's seminar presentation. Students will present a maximum of one seminar per day. A minimum of three faculty members must be present in order for a grade to be awarded for the seminar presentation. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

Dissertation / Thesis

Under the supervision of his/her mentor and of the Dissertation / Thesis Committee, the candidate shall prepare a thesis embodying the results of his/her investigative efforts in his/her selected major field or area of expertise. The candidate will submit a draft to the mentor and the members of the Committee at least six (6) weeks prior to the commencement date. The members of the committee will be allowed two (2) weeks after the receipt of the draft to propose in writing any changes, deletions, corrections and criticism to the draft. The Committee and the student will meet to discuss the recommendations. The candidate will then have ten (10) days to prepare the final draft of the thesis based on the changes, corrections, etc. submitted by each member of the Committee. The Committee will have two (2) weeks to reexamine the thesis and determine the acceptability of the thesis and the date of the thesis defense. Following your public defense, you have 10 days in which to make changes required by your committee. Your committee will have 2 weeks to reexamine the thesis and either approved it or disapproved.

The student must deliver the approved thesis in a CD-ROM or flash drive, according to the Thesis / Dissertation Manual, to complete the graduation requirements and receive his/hers diploma. The Graduate Programs in Biomedical Sciences Office will print and bind three (3) copies of the thesis (one for the student, one for the department and one for the library). Make sure that the Graduate School has your current contact information so you can be notified when the bound copies arrive at the Graduate School.

Dissertation / Thesis Defense

In order to be eligible to perform the Dissertation/Thesis defense, the candidate must have approved/completed all graduation requirements (including authorship requirements for Ph.D. students) excluding the Dissertation/Thesis and must have been notified by the Dissertation/Thesis Committee that his/her Dissertation/Thesis is defensible.

The defense will consist of a public presentation of the results and conclusions of the dissertation/ thesis research. The defense will take place at UCC. The defense is an oral defense and the candidate will be examined on the content of the thesis by the Dissertation/Thesis Committee. Other members of the academic community may attend the final examination and participate in the questioning. Once the public portion of the defense is completed, the Dissertation / Thesis Committee will meet privately with the candidate for further evaluation of the student's knowledge of the contents of the dissertation / thesis. A representative of the Graduate Program in Biomedical Sciences will be appointed by the Director and will act as an evaluator of the process. This representative will be from outside the student's department. The result of the defense will be notified orally and in writing to the candidate. In case of failure, the panel may recommend that the candidate be dismissed from the program or that a second opportunity to defend the thesis be allowed no later than six (6) months from the date of the first defense. A student may defend only twice.

The Graduate Program in Biomedical Sciences Office will make the official announcement for the defense after prior notification; the notification must receive no later than fourteen (14) days prior to the intended thesis defense date.

Dissertation / Thesis Defense Approval Form:

The Request for Permission for Dissertation / Thesis Defense form must be completed and submitted to the Graduate Programs in Biomedical Sciences at least two weeks prior to the final defense. A ballot for the final examination will be sent to the research advisor. After the defense, the original signed ballot must be returned to the Graduate Programs in Biomedical Sciences.

Specific Requirements for the Ph.D. Degree

Candidacy Examination

All Ph.D. students must pass the candidacy examinations by the end of their third year. Successful completion of this requirement is a necessary condition for advancement to doctoral candidacy and must be accomplished at least six (6) months prior to the dissertation defense. The dissertation committee is responsible for recommending advancement to candidacy to the Graduate Program in Biomedical Sciences Office. A graduate program representative will represent the Program at the dissertation defense and assure all regulations are followed.

The goal of the candidacy examination is for the faculty to assess the adequacy of the students' background knowledge in their chosen field and their ability for problem solving and for interpretation of important concepts before formally permitting them to begin their doctoral research. The dissertation committee will prepare the candidacy exam. A student who is in good academic standing but who fails the examination is allowed one (1) opportunity to retake the exam. In case of failure, the student will be reexamined no later than six (6) months from the date of the first examination. In case of a second failure, the student will be allowed to transfer to a MS/MA program. The student will not be allowed to reenter the Ph.D. Program.

Students in the PhD program can be awarded the MA or MS degree once they have completed all of the MA or MS graduation requirements. The candidacy examination will serve as the comprehensive exam.

Within six (6) months of passing the candidacy examination, the student is expected to present a research proposal to the dissertation committee. The dissertation committee will monitor his/her research progress on a regular basis, meeting at least once a year. A week prior to each meeting, the student will present a written summary of research progress to the committee for review. The research proposal defense can be part of the candidacy exam and can take place the same day.

Requirements for the Masters Degree

Comprehensive Examinations

All students enrolled in the MS and MA Programs must pass a written examination covering the student specialization subjects described in their program of study. In case of failure, the student will be reexamined no later than six months from the date of the first examination. In the event of a second failure, the department's faculty may recommend that the candidate be dismissed from the program or re-examined for a third and final time. The comprehensive examination is normally given near the end of the student's second year of graduate studies, or after the satisfactory completion of

the scheduled courses. The student mentor is responsible for the coordination and administration of the comprehensive examination.

Specific Requirements for the Master of Science (MS) Degree with Departmental Specialization

Course Requirements

All candidates for the MS degree must approve their program of study with a minimum grade point average of 3.0 (scale of 4.0). Specific course requirements, minimum passing grades and programs of study will be determined by each department.

Research Proposal

A written and oral presentation of a research proposal will be required from all MS candidates. In preparing the written proposal the student should follow the F31 guidelines set forth by the National Institutes of Health. The Thesis Committee must approve the proposal.

The candidate will submit a draft to the mentor and the members of the Committee at least two (2) weeks prior to the defense date.

Specific Requirements for the Master of Arts (MA) Degree with Departmental Specialization

Course Requirements

All candidates for the MA degree with departmental specialization must approve their program of study with a minimum grade point average of 3.0 (scale of 4.0). Written bibliographic reports included in their program of study will be assigned, supervised, and evaluated by a faculty member appointed by the mentor. Each bibliographic report will not carry a value of more than one (1) credit hour. Bibliographic Reports will be evaluated with GPBSF 19. Specific course requirements, minimum passing grades and programs of study will be determined by each department.

Specific Requirements for the Master of Arts (MA) Degree in the Biomedical Sciences

The Universidad Central del Caribe offers the M.A degree in the Biomedical Sciences to those students who wish to obtain a general knowledge but who do not want to specialize in any particular area of the Biomedical Sciences.

Course Requirements

All candidates for the M.A. degree in the Biomedical Sciences must complete the program with a minimum grade point average of 3.0 (scale of 4.0). Written bibliographic reports included in their program of study will be assigned, supervised, and evaluated by a faculty member appointed by the mentor. Each bibliographic report will carry a value of no more than one (1) credit hour. Bibliographic Reports will be evaluated with GPBSF 19.

Coursework

Changes to course pre-requisites apply to all students irrespective of the year of admission.

Course Load PhD Degree

A full-time load consists of no less than eighteen (18) credits per academic year. Students must register every term; failure to do so will automatically result in the student being dropped from the Program. Student must remain enrolled until completing all graduation requirements and delivering the final version of their Dissertation. If the student is dropped and wants to reenter in the Program, the student must reapply and go through the admissions process. Courses of the doctoral program are valid for seven years.

MS/MA Degree

A full time load consists of not less than nine (9) credits per academic year and two courses per semester. A student enrolled in Thesis work is considered a full-time student. Students must register every term; failure to do so will automatically withdraw the student from the Program. Student must remain registered until completing all graduation requirements and delivering the final version of their Thesis. In the event of withdrawal, a new application must be submitted if the student desires to continue in the Program.

Enrollment

The following documents are required for student to enroll in:

Year 1 Second Semester

• GPBSF 21 Student Registration Form

Year 2:

- Individual Development Plan (IDP)
- IDP completion certificate
- GPBSF1 Program of Study
- GPBSF3A MA-MS Mentor Registration or GPBSF3B Ph.D. Mentor Registration
- GPBSF17A MA/MS Graduate Student Annual Progress Report or GPBSF17B PhD Graduate Student Annual Progress Report
- GPBSF 21 Student Registration Form

Year 2 Second Semester:

- GPBSF3C MS/MA Advisory Committee or GPBSF3D PhD Advisory Committee
- GPBSF 21 Student Registration Form

Year 3:

- GPBSF5a Request Comprehensive Examination (MA/MS Students)
- GPBSF17A MA/MS Graduate Student Annual Progress Report or GPBSF17B PhD Graduate Student Annual Progress Report
- GPBSF 21 Student Registration Form

Year 3 Second Semester:

- GPBSF 5c Candidacy Exam Request (PhD Students)
- GPBSF 21 Student Registration Form

Year 4:

- GPBSF 5d Results of Oral Candidacy Examination or 5e Results of Written Candidacy Exam Request (PhD Students)
- GPBSF17A MA/MS Graduate Student Annual Progress Report or GPBSF17B PhD Graduate Student Annual Progress Report
- GPBSF 21 Student Registration Form

Year 4 Second Semester:

• GPBSF 21 Student Registration Form

Year 5:

- GPBSF17A MA/MS Graduate Student Annual Progress Report or GPBSF17B PhD Graduate Student Annual Progress Report
- GPBSF 21 Student Registration Form

Year 5 Second Semester:

- GPBSF7a Notification of Thesis / Dissertation Defense
- GPBSF 21 Student Registration Form

Directed Electives

All students (starting with the students admitted for August 2015) will enroll in

- BMS 880 Adult Learning and Evaluation Techniques
- BMS 881 Effective Teaching Techniques
- BMS 882 Supervised Teaching

Full-time Research Enrollment

Students will not enroll in full-time research without completion of the coursework required in their program of study.

Class Attendance

According to the Rules and Regulations of the UCC, attendance to classes and all other academic activities is compulsory. Students that do not present to class will be consider as unauthorized withdrawals.

Coursework at other institutions

Students may enroll in courses offered at other institutions. They must complete GPBSF18 to request authorization and submit transcripts of the coursework taken to be included in their UCC transcript. These courses will be included in the GPA calculation and count towards the graduation requirements.

If the student has not selected a Dissertation/Thesis Committee, the Graduate Program Office may approve the course.

Use of online courses offered by other institutions

The course must be approved by the mentor or OADRGS (if student does not have a mentor). UCC faculty member will supervise the student in the course. Grade will be awarded or approved by UCC faculty member.

Ownership of Unpublished Research Data

The student's research advisor owns all the unpublished research data generated in the laboratory. Students must meet with their advisor to clearly discuss the possibility of using unpublished research data.

Students may include unpublished research data (owned by a former advisor) in their dissertation with authorization of the Research Advisory Committee. This will proceed regardless the concurrence of the data owner. The unpublished data will be sequestered unless the owner authorizes its use. The student can only use the unpublished research data for his or her dissertation.

If the advisor has an obligation to an agency or other resource that is funding research involving a student, the nature of this obligation must be made clear to the student prior to the student beginning her/his work, for example restrictions on publication of results. Such obligations must apply to the student as well.

The Research Advisory Committee will sign a confidentiality agreement if data is sequestered.

Recognition for Outstanding Research

Graduate students with two first author publications will receive a certificate for their meritorious work and a medal at the commencement ceremony. This award is to recognize excellence in graduate student research.

V = Varies

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: ANATOMY AND CELL BIOLOGY ANATOMY TRACK

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 801	Teaching in Anatomy	2
BMS 802	Neuroanatomy	4
BMS 803	Anatomy of the Back & Limbs	3
BMS 804	Anatomy of the Thorax, Abdomen & Pelvis	4
BMS 805	Anatomy of the Head & Neck	5
BMS 806	Developmental Anatomy	2
BMS 807	Microanatomy	5
BMS 809	Seminar in Anatomy and Cell Biology	1
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 899	Graduate Research	6

This sample program of study requires completion of at least 39 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: ANATOMY AND CELL BIOLOGY CELL BIOLOGY TRACK

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 817	Signal Transduction	2
BMS 809	Seminar in Anatomy and Cell Biology	2
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 862B	Research Laboratories Rotations	2
BMS 899	Graduate Research	6
	Electives	9

This sample program of study requires completion of at least 34 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: BIOCHEMISTRY

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 523B	Molecular Biology	6
BMS 819	Seminar in Biochemistry	2
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 862B	Research Laboratories Rotations	2
BMS 899	Graduate Research	8
	Electives	3

This sample program of study requires completion of at least 34 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: MICROBIOLOGY AND IMMUNOLOGY

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 824B	Cellular and Molecular Microbiology	3
BMS 820C	Medical Bacteriology	2
BMS 821B	Immunology	3
BMS 822A	Parasitology	2

BMS 826A	Virology	2
BMS 829	Diagnostic Bacteriology	2
BMS 859	Seminar in Microbiology and Immunology	2
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 862B	Research Laboratories Rotations	2
BMS 899	Graduate Research	6

This sample program of study requires completion of at least 39 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: NEUROSCIENCES

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 580A	Neurosciences	6
BMS 580B	Advanced Neurosciences	3
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 862A	Research Laboratory Rotations	1
BMS 889	Seminar in Neurosciences	2
BMS 899	Graduate Research	6
	Electives	3

This sample program of study requires completion of at least 34 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: PHARMACOLOGY

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 540	Medical Pharmacology	6
BMS 849	Seminar in Pharmacology	2
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 899	Graduate Research	6
	Electives	7

This sample program of study requires completion of at least 34 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MS DEGREE: PHYSIOLOGY

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 530B	Physiology	6
BMS 830	Neurophysiology	5
BMS 839	Seminar in Physiology	2
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 862A	Research Laboratories Rotations	2
BMS 899	Graduate Research	6
	Electives	2

This sample program of study requires completion of at least 36 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MA DEGREE: ANATOMY AND CELL BIOLOGY ANATOMY TRACK

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 801	Teaching in Anatomy	2
BMS 802	Neuroanatomy	4
BMS 803	Anatomy of the Back & Limbs	3
BMS 804	Anatomy of the Thorax, Abdomen & Pelvis	4
BMS 805	Anatomy of the Head & Neck	5
BMS 806	Developmental Anatomy	2
BMS 807	Microanatomy	5
BMS 809	Seminar in Anatomy and Cell Biology	1
BMS 860	Scientific Methodology	2
BMS 861A	Biostatistics	3
BMS 868	Bibliographic Report(s)	2

This sample program of study requires completion of at least 35 credit hours for graduation.

SAMPLE PROGRAM OF STUDY FOR THE MA DEGREE: ANATOMY AND CELL BIOLOGY CELL BIOLOGY TRACK

Course Code	Course Title	Credits
BMS 500A	Responsible Conduct of Research	2
BMS 510G	Biochemistry and Cell Biology	6
BMS 817	Signal Transduction	2
BMS 819	Seminar	2
BMS 823	Cell Culture	2

INTERDISCIPLINARY COURSES DESCRIPTIONS

BMS 500A RESPONSIBLE CONDUCT OF RESEARCH

2 Credit Hours

On December 1, 2000, the US Public Health Service announced final PHS Policy for Instruction in the Responsible Conduct of Research (RCR) for extramural institutions receiving PHS funds for research. This policy required covered institutions to have in place, a program of instruction that complied with the policy. This course will cover the nine core instructional areas mandated by the PHS policy: Data acquisition, management, sharing, and ownership; Mentor/trainee responsibilities; Publication practices and responsible authorship; Peer review; Collaborative science; Human subjects; Research involving animals; Research misconduct; and Conflict of interest and commitment. The teaching strategies used are lectures, individualized learning and small group discussion. Student performance will be measured through exams and attendance.

BMS 512A CRITICAL THINKING

2 Credit Hours

The purpose of this course is to train students in the art of reasoning and critical thinking in the pursuit of answers to biological questions. The course encourages the active practice of critical reasoning, evaluation, and discussion. Students learn how to construct, defend, and criticize arguments; identify and assess tacit assumptions; and gather and evaluate evidence. The teaching strategies used are individualized learning and small group discussion. Student performance will be assessed through oral presentations and exams.

BMS 523B MOLECULAR BIOLOGY

6 Credit Hours

Molecular biology is a course that is designed to present and discuss the applications of molecular biology techniques. Throughout the course, the students will discuss experiments that define this field and examine the experimental designs used to prove the discoveries discussed, interpret the results and draw conclusions. Current topics will be based on the literature of recent advancements in the field and will also highlight experiments used. The teaching strategies used include lectures and

small group discussions. Student performance will be assessed through examinations, participation in class discussions and preparation of a specific aims page.

BMS 580A NEUROSCIENCES

6 Credit Hours

An introduction to fundamental aspects of nervous system function. Topics will include neurosignaling, neuroplasticity, neuroanatomy and brain function. Introduction to fundamental aspects of nervous system development, including neural determination, axon guidance, and neuron-target interactions, and overview of basics of integrative neural function, including sensory, motor and limbic systems, and computational neuroscience. The teaching strategies used in the course are lectures, individualized learning and oral presentations. Student performance will be evaluated by exams and oral presentations.

BMS 580B ADVANCED NEUROSCIENCES

3 Credit Hours

Prerequisite: BMS 580A

The objective of Advanced Neurosciences is to deepen knowledge in neurosciences and to learn how to identify current frontiers in a field. To become a successful scientist in a research field one needs to know where the 'field is going'. For the development of a vision of the current direction in a research field several skills are required: 1) knowledge of the literature, 2) critical thinking, and 3) communication skills.

Introductory lectures will be given by faculty members for each topic. The topics will be further deepened during interactive group discussion. During group discussions original research papers and review articles are presented by students and discussed by the group. Student performance will be assessed through an exam and oral presentations.

BMS 580C MEDICAL NEUROSCIENCES

6 Credit Hours

The course covers topics ranging from neuronal structure and function, communication at the synapse, membrane receptors and intra- and intercellular signaling systems, to the gross organization of the brain and spinal cord, the processing of sensory information, the programming of motor responses, and higher functions such as learning, memory, cognition, and speech. During the course, the student will become acquainted with the use of monoclonal antibodies, gene cloning, cell labeling and tracing, patch clamping and radioligand binding methods which have shed light into the structure and function of the basic unit of brain tissue, the neuron.

The student will also be introduced to noninvasive approaches and instruments for the in-vivo study and analysis of brain tissue, NMR, CAT and PET scans. Finally, this knowledge shall lead the student to a better understanding of the principles underlying the rational pharmacological therapy of diseases related to the nervous tissue, and the new perspectives in therapy of these pathological conditions. The course includes a practical laboratory component.

The course goals are reached through diverse educational strategies such as: lectures, laboratories, small and large group discussions. Evaluation is based on written exams and practical computer-based examination using the LXR testing program. In addition, written, and quizzes using the Personal Response System (PRS) are incorporated both as formative as well as summative strategies.

BMS 811 RNA

2 Credit Hours

This course focuses on RNA. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 812 EPIGENETICS

2 Credit Hours

This course focuses on epigenetics. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 823 CELL CULTURE

2 Credit Hours

The requirements for a cell culture laboratory, from the standpoint of cell protection and control of biohazards for personnel are discussed, including special laboratory practices and equipment. Aseptic techniques specific to the tissue culture laboratory will be presented. The specific nutritional requisites for different types of cells are considered and how these specific nutrient requirements vary according to the type of cell, use, applications, purpose of the culture and its functions. Within culture conditions the physical requisites for gas exchanges, buffering systems and characteristics and uses are also considered, including adherent and non-adherent cultures; primary, long-term and transformed cell cultures. Sources of cells, initiation of cultures and storage techniques are considered. Principles of good cell keeping are stressed, including routine record keeping, routine inspection of laboratory equipment. The most frequent applications of cell cultures, as well as procedures for cell phenotyping are studied. The teaching strategies used are lectures and laboratory exercises. Student performance will be assessed through exams and laboratories.

BMS 831 MEMBRANE TRANSPORT

2 Credit Hours

This course discusses fundamental concepts involving the transport of molecules and ions across biological membrane, including discussion of passive and active transport, as well as other transport processes. Examples from selected papers will be presented to illustrate the above concepts. Clinical correlations will also be presented in order to illustrate the importance of the basic concepts on clinical situations. The teaching strategy used in this course is small group discussion. Student performance will be evaluated through class participation and an oral presentation.

BMS 860 SCIENTIFIC METHOLODOGY

2 Credit Hours

This course will introduce basic concepts of scientific methods commonly used in biomedical research. All students will be required to actively participate in theoretical and practical discussions of scientific research and procedures. They will be given assignments of different topics to help them deepen their understanding of the material. The teaching strategy used in this course is lectures. Student performance will be evaluated through class participation and exams.

BMS 861A BIOSTATISTICS

3 Credit Hours

This is essentially a two-part introductory course. Initially, there will be lectures to familiarize the students with the basic concepts of statistics, statistical analysis, and data manipulation. Depending on student background, the lectures will begin with fundamental explanations of means, modes, normal distribution, variance standard deviation, continuing with hypothesis testing, confidence levels, standard error, regression line, correlation, multiple regression, students T-test chi-square, and ANOVAs. Following the didactic portion of the course, students will be exposed to demonstrations on the use of the computer for accessing statistical and database programs. Small projects will be assigned or devised by the students to demonstrate proficiency in experimental design and data interpretation. The teaching strategies used in this course are lectures and laboratories. Student performance will be evaluated through class participation and exams.

BMS 862A/B RESEARCH LABORATORIES ROTATIONS

1-2 Credit Hours

Research laboratory rotations are intended to introduce students to the laboratory opportunities available through the Graduate Program in Biomedical Sciences. Students will rotate through not less than three different active research laboratories in such a way that the experience they acquire during these rotations will help them decide their area of interest and the mentor under whose supervision he/she will train. Eight weeks of rotation will be equivalent to 1 credit hour. Students are expected to work six hours a week in the laboratory. The teaching strategy used in this course is laboratory work. Student performance will be evaluated through their performance in the research laboratory.

BMS 863A CANCER BIOLOGY

Prerequisite: BMS 523B

2 Credit Hours

This course presents the principles of cancer biology. The topics that will be covered in the course include growth factors, control of the cell cycle, multistep tumorigenesis, invasion and metastasis, among others. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 864A CANCER MOLECULAR BIOLOGY

Prerequisite: BMS 863A

2 Credit Hours

This course is designed to provide students with a thorough and in-depth understanding of fundamental concepts in cancer biology at the cellular and molecular levels. The topics that will be covered in the course include oncogenes and tumor suppressor genes, cell cycle regulation, signal transduction pathways, apoptosis, DNA repair mechanisms, tumor immunology, animal models for human cancers, cancer therapy and cancer epigenetics, among others. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 865A SCIENTIFIC COMMUNICATION

2 Credit Hours

This course provides instruction and examples on the different aspects of use of the written and oral language, and graphic representations. The course aims to build a foundation for students to engage in effective scientific communication. The teaching strategies to be used include: lectures,

individualized learning, small group discussions and critiques of written and oral examples. Students' performance will be measured through evaluations of written and oral presentations, written assignments, class discussion and evaluation by peers. Full attendance is required.

BMS 866 GRANT WRITING

3 Credit Hours

The course goes through the process of writing the F31 grant for PhD students turning a gap in knowledge into a proposal. Students will enter the course with a hypothesis and preliminary data and will be expected to submit a F31 grant either during or just after the course. The course will cover the NIH proposal, review process, and revisions. Evaluation will be by assignments, presentations, participation in the review process and tests.

BMS 867A GLIAL-NEURONAL CELL INTERACTIONS IN BIOLOGY AND DISEASE 2 Credit Hours

This course is designed to provide students with a thorough and in-depth understanding of glialneuronal cell interactions. The topics that will be covered in the course include morphology of glial cells, glial development, physiology of glial cells, among others. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 868 A/B/C BIBLIOGRAPHIC REPORT

1 Credit Hour

A library review of a topic assigned by the student's mentor or the Committee. Required of all students registered for the MA degree. See the Bibliographic Report Formatting section for details on how to prepare the document. Bibliographic Reports will be evaluated with GPBSF 19.

BMS 869A/B SEMINAR IN THE BIOMEDICAL SCIENCES

1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS/MA students are required to present two seminars. BMS 869A will be used for the first seminar offered and BMS 869B for the second.

BMS 870-874 TOPICS (SPECIFY)

1-3 Credit Hours

Graded or Pass/Fail (Certificate of Participation)

The topics course has been designed to provide the graduate student with the theoretical background and practical experience required for the in-depth understanding of specialized topics of interest to the student. The teaching strategy used in the course is small group discussion. Student performance will be assessed by either presentations, exams, written reports and/or class participation. The student and faculty member will determine their meeting schedule.

BMS 875A CELL GROWTH AND DEATH

2 Credit Hours

This course cover in-depth mechanisms related to cell growth and death. The topics that will be covered in the course include apoptosis, autophagy, necrosis, intrinsic and extrinsic apoptotic signal cascades, caspase-independent cell death, mitochondrial death effectors, anti-apoptotic proteins, and intracellular proteases. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 876A IMMUNOPATHOLOGY

Prerequisite: BMS 821B

2 Credit Hours

This course covers in-depth immune mechanisms of disease including immunodeficiencies, hypersensitivity disorders and autoimmunity. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 877A MOLECULAR IMMUNOLOGY

Prerequisite: BMS 821B

2 Credit Hours

This course covers in-depth the molecular mechanisms involve in mounting an immune response. Topics include generation of antibodies, antigen processing and presentation, lymphocyte activation and immune regulation. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 878A CYTOSKELETON AND CELL MOTILITY

2 Credit Hours

This course focuses on the components of the cytoskeleton and actin-based cell motility. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 879A/B SEMINAR IN CELLULAR AND MOLECULAR BIOLOGY 1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS students are required to present two seminars. BMS 819A will be used for the first seminar offered by the student and BMS 819B for the second.

BMS 880 ADULT LEARNING AND EVALUATION TECHNIQUES

1 Credit Hour

The course provides an overview of basic principles of learning theory, characteristics of adult learners, what motivates adults to learn, evaluation of performance, effective methods of giving feedback, grading practices, types of exams, construction of effective exams and alternative testing methods. Teaching strategies include lecture, individualize learning, discussion, and practical exercises. Student performance will be assessed through exams and evaluation of exercises.

BMS 881 EFFECTIVE TEACHING TECHNIQUES

Prerequisite: BMS 880

1 Credit Hour

The course provides an overview of basic methodology of effective teaching techniques. Topics will include strengths and limitations of teaching methods, advantages and disadvantages of different types of visual aids, selection of delivery strategy, how to improve retention of information, positive and negative transference, positive reinforcement vs. negative reinforcement. The teaching strategies include lecture and practical exercises. Student performance will be assessed through exams and evaluation of exercises. Prerequisite: Adult Learning and Evaluation Techniques

BMS 882 SUPERVISED TEACHING

Prerequisite: BMS 880 and BMS 881

1 Credit Hour

This elective is designed to provide students with experience in teaching and improve the students¹ teaching skills. Students will serve as instructors to new graduate students providing a laboratory safety lecture and introducing new graduate students to the use of laboratory equipment, including a laboratory exercise. Following the teaching format of an undergraduate laboratory course, the students will prepare an introductory lecture to a laboratory exercise that will be followed with a laboratory session. The student's course grade will be based on the evaluation of the two lectures and the laboratory exercise. Prerequisite: Adult Learning and Evaluation Techniques, Effective Teaching Techniques

BMS 883A CELL MEMBRANES

2 Credit Hours

This course focuses on the organization of cellular membranes. Topics include membrane lipids, membrane proteins, and membrane related structures. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 884 THE ENDOPLASMIC RETICULUM

2 Credit Hours

This course focuses on the endoplasmic reticulum. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 885 THE EXTRACELLULAR MATRIX

2 Credit Hours

This course focuses on the extracellular matrix. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 886 THE GOLGI

2 Credit Hours

This course focuses on the golgi. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 887 THE MITOCHONDRIA

2 Credit Hours

This course focuses on the micochondria. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 888 THE NUCLEUS

2 Credit Hours

This course focuses on the nucleus. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 891 LIPIDS

2 Credit Hours

This course focuses on lipids. The course consists of lectures given by the participating faculty and presentations and discussions of current research and review papers by students. Active student participation is expected at all times. Student performance will be evaluated by exams and participation in class discussions.

BMS 892 FLUORESCENCE MICROSCOPY

2 Credit Hours

Provides students with practical knowledge of fluorescence microscopy methods and possible applications to their research. The course will cover the different aspects of modern microscopy, such as: hardware, optics, lightning, fluorescent labels, sample preparation, decoding cell components, probing cell structure-function, confocal microscopy, image acquisition and quantitative image analysis. Discussion of research articles will demonstrate and extend what is learned in lectures. The teaching strategies used are lectures, individualized learning and small group discussion. Student performance will be measured through exams, oral presentations and attendance.

BMS 893 Microelectrode Techniques in Neurophysiology

3 Credit Hours

The purpose of this course is to expose the students to the basic terms, concepts and methods of electrical activity measurement in the biological systems, with a special emphasis on microelectrode techniques used in the field of neurophysiology. The course will include theoretical classes, calculations and problem solving exercises and demonstration of the selected electrophysiological techniques in the rodent brain slices. Student performance will be measured through exams and attendance.

BMS 899 GRADUATE RESEARCH

Variable

Grading is Pass or Fail

The student will perform faculty-supervised research in the laboratory with a faculty member who will serve as the student's research advisor. This research will be the basis for the written dissertation or thesis, which is required for the Ph.D. or M.S. degree, respectively. The main objective is to develop a specific research project and produce meaningful data, which can contribute further knowledge in the area. The data should be publishable in a peer-reviewed journal and acceptable for presentation as a written dissertation or thesis as partial fulfillment of the requirement for the Ph.D. or M.S. degree. Upon completion, the student will present his/her research in seminar form to the academic community as a final defense of the dissertation or thesis. The teaching strategies used in this course are individualized learning and laboratory work. Student performance will be assessed through their performance in the research laboratory and dissertation or thesis defense.

BMS 909 RESEARCH SEMINAR

1 Credit Hour

Grading is Pass or Fail

Beginning on the first semester of their third year, students will enroll in one (1) credit of Research Seminars every semester that they remain active in the program. The course will consist of weekly meetings in which the students will present their research projects and current results. The course will provide students with the experience of presenting their research to a multidisciplinary audience and practice their presentation skills. On average students will present once per year.

For students with no other coursework, a full-time load will be 8 credits of BMS 899 Graduate Research and 1 credit of BMS 909. Grading will be based on student attendance. Seven (7) or more absences per semester will result in a failing grade. Students attending a scientific meeting will be excused from that week's seminar. Students performing research and/or visiting the laboratories outside of UCC will participate in seminars at the visiting institution to meet attendance requirements. The PI of the host laboratory will certify attendance.

DEPARTMENT OF ANATOMY AND CELL BIOLOGY

JIMENEZ, SOFIA Associate Professor, Department Chair Ph.D. University of Puerto Rico School of Medicine, 1984

CUBANO, LUIS Professor Ph.D., Kansas State University, Manhattan, Kansas, 2000

HAIFFE, ROSA M. Professor M.D., Universidad Autónoma de Santo Domingo, 1968

BAKSI, KRISHNA Associate Professor Ph.D., All India Institute of Medical Sciences, 1977

OLIVER, JOSE LUIS Associate Professor DMD, University of Puerto Rico MSC, 2002

VERAS, WILSON Associate Professor M.D., Universidad Autónoma de Santo Domingo, 1989

DHARMAWARDHANE, SURANGANIE Adjunct Associate Professor Ph.D., University of Massachusetts, 1987

WASHINGTON, ANTHONY Adjunct Associate Professor Ph.D., Southern Methodist University, 1998

GRADUATE COURSES

BMS 801 TEACHING IN ANATOMY

2 Credit Hours

This course will provide students with an overview of basic principles and methodology in education as well as the opportunity to utilize these concepts while serving as teacher aids in the morphology courses taught throughout the academic year by the Department of Anatomy. All the first year Biomedical Sciences Morphology Courses are pre-requisites.

BMS 802 NEUROANATOMY

4 Credit Hours

This course deals with the general organization and meaning of the nervous system, its embryology and histological structure. The organization and segmental distribution of the peripheral nerve elements and the architectonics of the Central Nervous System are studied by levels. The main sensory (ascending) and motor (descending) pathways are discussed in relationship to cortical organization. Topics in neurophysiology are included to integrate structural and functional features of the CNS. Currently, this course is based on the medical sciences course on Neurosciences which is offered during the second semester; however, the student will benefit from attending other sections of this course besides the Neuroanatomy component to get an insight into the physiology, biochemistry and pharmacology pertinent to this area. The course also includes a practical laboratory component.

BMS 803 ANATOMY OF THE BACK & LIMBS

3 Credit Hours

This course represents a block of the survey of the regional and functional anatomy of the human body. The course includes lectures by the faculty, case study presentations by students and laboratory work. The laboratory work will include a dissection lab and a concurrent applied clinical anatomy lab geared to the study of radiological anatomy, cross-sectional anatomy, surface-projection anatomy as well as the biomechanics of the locomotion apparatus.

BMS 804 ANATOMY OF THE THORAX, ABDOMEN & PELVIS

4 Credit Hours

This course represents a block of the survey of the regional and functional anatomy of the human body. The course includes lectures by the faculty, case study presentations by students and laboratory work. The laboratory work will include a dissection lab and a concurrent applied clinical anatomy lab geared to the study of radiological anatomy, cross-sectional anatomy, surface-projection anatomy as well as the morphological principles of respiration, circulation, digestion and reproduction.

BMS 805 ANATOMY OF THE HEAD & NECK

5 Credit Hours

This course represents a block of the survey of the regional and functional anatomy of the human body. The course includes lectures by the faculty, case study presentations by students and laboratory work. The laboratory work will include a dissection lab and a concurrent applied clinical anatomy lab geared to the study of radiological anatomy, cross-sectional anatomy, surface-projection anatomy as well neuroanatomy.

BMS 806 DEVELOPMENTAL ANATOMY 2 Credit Hours

This course describes the human embryonic development taking into account (1) normal morphology and function, (2) the new technology that allows the manipulation and study of the human embryo and fetal development, (3) the developmental basis for the more important congenital abnormalities, and (4) clinical correlations to further emphasize the practical implications of such malformations.

Part one of the course covers in detail the early development, the function of the structures and tissues, and the relationship between the mother and fetus. An overview of the main changes from the third month to birth introduces the student to the next section of the course, bringing together the entire process of embryonic development to result in the birth of the fetus. Part two discusses in detail the development of the body systems, both normally and in the development of anomalies, emphasizing the immediate and normal adaptations in each system, necessary for life outside the womb.

New tools and techniques such as ultrasound and other imaging modalities have provided new ways of visualizing living embryos; however, these techniques are presented in the discussion of specific systems due to the time constraints of the course.

BMS 807 MICROANATOMY

5 Credit Hours

The first part of the course - cell and basic tissues will prepare those who have no experience in histology with the background necessary to understand the normal morphological adaptations and modifications of tissues in the formation of organs; and enable the student to understand why these adaptations and modifications provide the body with the basic and fundamental functions to have and maintain a general well-being.

Outlining the principal methods employed in the microscopic study of cells, tissues, and organs, will set the stage for the subsequent detailed study of the cells and tissues of the body in other basic sciences courses. The course requires a general knowledge of cellular and molecular biology as well as familiarity in the usage of the bright field binocular microscope.

BMS 809A/B SEMINAR IN ANATOMY AND CELL BIOLOGY

1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS/MA students are required to present two seminars. BMS 809A will be used for the first seminar offered and BMS 809B for the second.
BMS 810 COMPARATIVE ANATOMY 4 Credit Hours

This course is a study of the structural and functional evolution of selected organ systems in representative vertebrates. It examines how organ systems work and how they evolve within a phylogenetic context. The purpose is to better understand the vertebrate design. For this purpose, the vertebrate groups are organized phylogenetically and their systems are interpreted in terms of their embryological development, phylogeny and functional adaptations. The main emphasis is given to the morphology and structural organization of organ systems and how they undergo adaptive changes on the basic vertebrate body plan.

Short writing assignments will be given to be discussed in every discussion session. Satisfactory completion of all assignments will be required to pass the course, but the assignments may not receive a letter grade.

DEPARTMENT OF BIOCHEMISTRY

HANN, RICHARD M. Professor, Department Chair M.D., University of Oklahoma, 1974

EATON, MISTY Professor Ph.D., University of Texas Southwestern Medical Center, 1990

FERCHMIN, PEDRO Professor Ph.D., Universidad Nacional de Córdoba (Argentina), 1971

MARTINS, ANTONIO HENRIQUE BACCIN Adjunct Assistant Professor Ph.D., University Federal of São Paulo, Brazil, 2006

GRUDZIAK, GEORGE Adjunct Assistant Professor M.D., University of Wroclaw in Poland

GRADUATE COURSES

BMS 510G BIOCHEMISTRY AND CELL BIOLOGY

6 Credit Hours

Biochemistry and Cell Biology is a foundation course that is designed to introduce graduate students to the most important concepts of biochemistry and cell biology. The Biochemistry and Cell Biology for Graduate Students course integrates the disciplines of biochemistry and cell biology and presents the most important concepts in each. The course is conducted in the Spring semester. The Biochemistry and Cell Biology course features conferences that are taught by a team of professors with expertise in their respective fields. In these classes, the course faculty present and discuss with the students the most important course concepts. Student interaction with the presenting faculty during these classes is encouraged. Student knowledge in the Biochemistry and Cell Biology course is evaluated with course examinations.

BMS 813 ENZYMOLOGY AND KINETICS

Prerequisite: BMS 510G

2 Credit Hours

The course emphasizes concepts and current methods of enzyme structure and kinetics. These concepts are applicable to the general field of receptor-ligand interactions. The use of mathematical models to help understand the kinetic behavior of a particular compound will also be discussed.

BMS 814 METABOLISM

Prerequisite: BMS 510G

2 Credit Hours

Topics in this course will cover metabolism of carbohydrates, lipids, amino acids and other important metabolites. The topics will be covered in depth and the relationships among them will be pointed out. Specific topics presented and discussed in this course will depend on the participating faculty and the interests of the enrolled students. Abnormalities in the pathways of each will be emphasized. Along with the lectures there will be reading assignments of journal articles related to the specific topic. Student performance will be assessed by either presentations, exams, written reports and/or class participation. The student and faculty member will determine their meeting schedule.

BMS 815 PROTEIN STRUCTURE AND FUNCTION

Prerequisite: BMS 510G

2 Credit Hours

Topics in this course emphasize the physical and chemical bases for protein structure and function. The relationships between amino acid sequence, secondary structure, tertiary structure and activity will be discussed. Topics will include the use of site-directed mutagenesis to deduce protein function and principles of protein-protein interactions. The teaching strategies used are lectures and laboratories. Student performance will be evaluated through exams and class participation.

BMS 816 GENE EXPRESSION AND PROTEIN SYNTHESIS

Prerequisite: BMS 510G

2 Credit Hours

This course is an advanced study of important recent literature dealing with the structure and function of nucleic acids, biosynthesis of proteins, and the control of gene expression. The teaching strategies used are journal article discussions, oral presentations and individualized learning. Student performance will be assessed through class participation and oral presentations.

BMS 817 SIGNAL TRANSDUCTION Prerequisite: BMS 510G, BMS 523B 2 Credit Hours

A variety of topics in signal transduction will be covered, including the general principles of cellular communications, surface and intracellular receptors, secondary messengers and effectors, and integration of signaling pathways for physiological processes. The first half of the course will examine the mechanism of action for enzyme-linked receptors, G-Protein Coupled or Heptahelical receptors and associated proteins, and intracellular/lipid signaling. The second half of the course will integrate specific signaling pathways with important biological processes such as stem cell differentiation, abnormal cell growth, neuroprotection, and other neuronal processes.

Classes will meet for 2 hours on a weekly basis for 12 sessions. Weekly reading assignments will consist of current research article(s). Students will be evaluated on the basis of a mid-term exam, class participation in the discussion of the paper, and an oral presentation on a topic of their choice.

BMS 819A/B SEMINAR IN BIOCHEMISTRY

1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS students are required to present two seminars. BMS 819A will be used for the first seminar offered by the student and BMS 819B for the second.

BMS 890 NEURONAL AND GLIAL CELL CULTURE

2 Credit Hours

This course is designed to provide students with a thorough and in-depth understanding of the isolation and establishment of mixed neuronal and glial culture from postnatal rats and the maintenance of those cultures. Participants will perform preparations, learn to maintain the cell cultures, describe the cultures by direct observation and typified using immunocytochemical methods. Student performance will be evaluated through their performance in the laboratory.

RODAS, ARCADY R. Adjunct Assistant Professor M.D., University of Zulia School of Medicine, Maracaibo, Venezuela, 1985 MPH., University of Puerto Rico, Medical Sciences Campus, 2007

SEPULVEDA, LYCELY. Adjunct Assistant Professor Ph.D., Michigan State University, 2000

GRADUATE COURSES

BMS 820C MEDICAL BACTERIOLOGY

2 Credit Hours

This course will introduce students to the relationship between microorganisms and human health. Principles and processes by which these microorganisms cause disease, their virulence factors, transmission, consequences and the signs and symptoms of the diseases they produce will be discussed. In addition, the methods used for the identification of pathogenic organisms as well as for their prevention and treatment will be introduced. Specific laboratory exercises and review of recently published scientific manuscripts will be included. The teaching strategies used in the course include lectures laboratories and small group discussions. Student performance will be evaluated through exams, laboratory exercises and small group discussion. This is a year-long course.

BMS 821B IMMUNOLOGY

3 Credit Hours

This course provides graduate students with a working knowledge of the immune system and the specialized vocabulary that describes it. Topics to be covered include: (1) the structure, function, and genetics of immunoglobulins, (2) T-lymphocyte antigen receptors, and major histocompatibility complex-encoded proteins, (3) the development and differentiation of lymphocytes, (4) cell-to-cell interactions in the immune system, and (5) the regulation of immune responses. It also will include laboratory exercises and discussion of scientific papers that are used to illustrate experimental approaches to current questions. The teaching strategies used in the course include lectures, laboratories, small group discussion and individualized learning. The students will be evaluated by exams and small group discussion.

BMS 822A PARASITOLOGY

Prerequisite: BMS 821B

2 Credit Hours

This course encompasses the presentation and discussion of parasitic organisms of medical and veterinary importance, with emphasis on life cycles, host-parasite relationships, epidemiology, diagnostic procedures, pathogenesis, treatment, and control methods. Practical laboratory experience is included. The teaching methods utilized in the course are lectures, laboratories, small group discussions and individualized learning. Student performance will be assessed by exams, laboratories, oral and written presentations, and quizzes.

BMS 824B CELLULAR AND MOLECULAR MICROBIOLOGY

3 Credit Hours

An advanced course designed for graduate students in biomedical sciences. The course emphasizes the function of microbial structures and the metabolism and control of microorganisms. The course includes the study of gene structure, genetic variations, metabolic regulation and regulation of gene expression, and recombinant DNA techniques. The basic mechanisms of action of antimicrobial agents are also considered. The laboratory exercises include techniques used, DNA extraction, protein extraction and separation, 2-D gel analysis, protein identification, genomics and proteomics. The teaching strategies used in the course include lectures, problem solving, individualized learning and oral presentations. Student performance will be measured by exams and presentations.

BMS 825A MYCOLOGY Prerequisite: BMS 821B 2 Credit Hours

This course deals with fungi of industrial and medical importance. The course will give emphasis on: morphology, structures, physiology, genetics, growth and nutrition, classification, life cycles, host-parasite, identification, pathogenesis, contaminants and diagnostic of different mycoses, ecology, and economic importance of fungi. In laboratories, the procedures used for isolation and identification of fungi will be included. The course consists of lectures, laboratory, and critical readings of the primary literature and student presentations. Heavy emphasis will be placed on student participation. The students will be evaluated through exams, laboratories, class presentations and term papers.

BMS 826A VIROLOGY Prerequisite: BMS 821B 2 Credit Hours

This course consists of the study of viruses and their interaction with humans and animals. The course consists in five main units: 1) Fundamental principles of virology, detection methods and genetics; 2) Genome structure and replication; 3) Host response to viral infection; 4) Pathogenesis, prevention and control of specific virus, and emerging viruses, 5) Discussion on recent scientific articles. The teaching strategies include lectures, laboratories, small group discussion and individualized learning, and small group discussion. The students will be evaluated by exams, laboratories, oral and written presentations.

BMS 829 DIAGNOSTIC BACTERIOLOGY

Prerequisite: BMS 821B, BMS 820C

2 Credit Hours

The course acquaints the student with microorganisms with emphasis on the bacteria in diseases of man. Theory and principles of isolation, identification, biochemical reaction, growth requirement and susceptibility testing will be considered. Theory and practical application will include lecture, demonstration, laboratory practice, audiovisual presentations, written reports/journals, and small group activities. The teaching strategies are lectures and laboratories. Student performance will be assessed by exams, laboratory reports and student presentations.

BMS 859A/B SEMINAR IN MICROBIOLOGY AND IMMUNOLOGY

1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS/MA students are required to present two seminars. BMS 859A will be used for the first seminar offered by the student and BMS 859B for the second.

DEPARTMENT OF PATHOLOGY AND LABORATORY MEDICINE

SILVA, WALTER Adjunct Associate Professor Ph.D., Mount Sinai School of Medicine, NY, 1984

GRADUATE COURSES

BMS 540 MEDICAL PHARMACOLOGY 6 Credit Hours

The course aims to present the basic knowledge of the way drugs act upon the body; provide the essential knowledge for the understanding of drug therapy; and provide for the rational use of different drugs in clinical situations. It includes the chemistry of drugs, structure-activity relationship of different kinds of drugs, pharmacokinetics, absorption, distribution, excretion, metabolism, pharmacological actions, mechanism of action, clinical uses, side effects toxicity, adverse reactions, and interactions of substances used in the diagnosis, prevention and treatment of disease. It also emphasizes the effect of endogenous and exogenous substances at the cellular level. This is a year-long course.

The course involves lectures and conferences on blocks of material such as general pharmacological principles, autonomic pharmacology, cardiovascular drugs, CNS pharmacology, pharmacology of chemotherapeutic agents, endocrine pharmacology, gastrointestinal pharmacology, autacoids and anti-histamines, prostaglandins, drug interactions and clinical toxicology.

BMS 841 BIOCHEMICAL PHARMACOLOGY

Prerequisite: BMS 540 (or concurrently enrolled)

3 Credit Hours

In this course the fundamental and basic pharmacological concepts are integrated with Biochemistry. The following topics are presented in detail: pharmacokinetics, pharmacodynamics, mechanisms of drug metabolism (cytochrome P-45- systems, transferases, etc.), ions and amino acids transport, metabolism of biogenic amines, neuronal receptors, etc.

BMS 843 PRINCIPLES OF CHEMOTHERAPY

2 Credit Hours

This course encompasses such topics as general pharmacological and pharmacokinetic principles, discussion and presentation of the agents used in the treatment of infectious disease, such as antibiotics, antifungal, antiviral, antihelminthic drugs and antimalarials, cancer chemotherapy, immunotherapy and principles of drug interactions. This course is specifically designed for those students not majoring in the area of Pharmacology and whose interests are met by studying specific topics in Pharmacology.

BMS 849A/B SEMINAR IN PHARMACOLOGY

1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS students are required to present two seminars. BMS 849A will be used for the first seminar offered by the student and BMS 849B for the second.

DEPARTMENT OF PHYSIOLOGY

SANABRIA, PRISCILA Professor, Department Chair Ph.D., University of Puerto Rico, Medical Sciences Campus, 1986

RIVERA, AMELIA Professor Ph.D., University of Puerto Rico, Medical Sciences Campus, 1982

ROJAS, LEGIER Professor Ph.D., University of Puerto Rico, Medical Sciences Campus, 1987

SKATCHKOV, SERGUEI Professor Ph.D., Leningrad State University, 1991

BENEDIKT, JAN Assistant Professor Ph.D., Charles University, Prague, Czech Republic

INYUSHIN, MIKHAIL Assistant Professor Ph.D., Leningrad State University, 1986

GRADUATE COURSES

BMS 530B PHYSIOLOGY

6 Credit Hours

This course offers a detailed presentation of the currently accepted concepts dealing with the manner in which the individual cells and organs are integrated into the complex functions by the living organisms as well as the processes which compose the activities of living cells and organ systems. Clinical correlations are held for the presentation and discussion of cases pertaining to each of the systems studied. Group discussions are held in which students prepare and present a case study for each system. The topics covered include the physiology of the major organ systems (neuromuscular, reticuloendothelial, cardiopulmonary, renal, gastrointestinal, endocrine and reproductive). The teaching strategies used in the course include lectures and individualized learning. Student performance will be assessed through exams and student presentations.

BMS 830 NEUROPHYSIOLOGY

5 Credit Hours

The course introduces students to the basic principles of neuroscience that all physiology graduate students are expected to know before embarking on their specialized research programs. Several topics will be discussed, ranging from cellular aspects of neuronal signaling to cortical mechanisms of perception and motor control. A discussion-based format with a focus on original papers, exercises and demonstrations will allow students to familiarize themselves in the fundamental issues at the heart of contemporary neuroscience. Emphasis will be given to the critical evaluation of neuronal theories of brain function. The teaching strategies used in the course are lectures, individualized learning and oral presentations. Student performance will be evaluated by exams and oral presentations.

BMS 832 CARDIOVASCULAR PHYSIOLOGY Prerequisite: BMS 530

2 Credit Hours

This course provides detailed discussion on the physiology of the cardiovascular system, such as electrophysiology of the myocardium, cardiac work, control of cardiac function, peripheral circulation, cardiac output, pathogenesis of atherosclerosis, atrial natriuretic peptide, and inter-cellular communication in the myocardium. The teaching strategies used in the course are lectures and individualized learning. Student performance will be assessed by exams and oral presentations.

BMS 833 RENAL PHYSIOLOGY

Prerequisite: BMS 530

2 Credit Hours

This is a combined lecture-seminar course emphasizing special topics in renal physiology and the physiology of body fluids. Topics in renal physiology will include initially an overview of the renal physiology to then review specific mechanism of the normal function or during pathological situation to be discussed using specialized publications in the area. Students are expected to present two seminars during the course. The teaching strategies used in this course are lectures and individualized learning. Student performance will be assessed through student presentations and exams.

BMS 834B ADVANCED NEUROPHYSIOLOGY

Prerequisite: BMS 530, BMS 830

2 Credit Hours

Combined lecture-seminar course emphasizing special topics in Neurophysiology. Students, the instructor in charge of the course and invited scientists are expected to participate in seminar presentations during the course.

BMS 839A/B SEMINAR IN PHYSIOLOGY

1 Credit Hour

This course consists of an oral presentation in a seminar format of a relevant topic within the area of specialization. The student upon consultation with the mentor or other academic advisor will select the topic. The topic may be from directed readings or from the student's research. The faculty will provide assistance to the student in preparing for the seminar presentation.

The seminar is not the presentation of a research publication (single paper). It is intended to develop in the students the capacity to prepare a class on a specified topic.

The student's course grade will be based on faculty evaluation of the seminar. The course consists of a one-hour seminar and a minimum of 23 hours of preparation including readings to prepare for the seminar, therefore the course is worth one credit hour. The seminar will be announced and open to the academic community. GPBSF 14 Seminar Presentation Evaluation Form will be used to evaluate students' presentations.

MS/MA students are required to present two seminars. BMS 839A will be used for the first seminar offered by the student and BMS 839B for the second.

19	GPBSF12	Graduate Program in Biomedical Sciences Exit Survey
20	GPBSF13	Graduate Program In Biomedical Sciences Catalog Receipt
21	GPBSF14	Seminar Presentation Evaluation
22	GPBSF15	Laboratory Rotation Agreement
23	GPBSF16	Laboratory Rotation Evaluation
24	GPBSF17A	MS/MA Graduate Student Annual Progress Report
25	GPBSF17B	PhD Graduate Student Annual Progress Report
26	GPBSF18	Request to Take a Course at Another Institution
27	GPBSF19	Evaluation of Bibliographic Report
28	GPBSF21	Student Registration Form
29	GPBSF23	Receipt: Keys for the Graduate Student Office
30	GPBSF24	Graduation Requirements Check List

BIBLIOGRAPHIC REPORT FORMATTING

The bibliographic report should be based on information provided and synthesized from primary contemporary literature. The report is meant to provide an overview of a topic. It should be 15-25 pages in length with at least 25 references.

Font/Spacing/Formatting

Must be printed on 8.5" x 11" paper on one side of the page only. They should be printed double space, on standard Arial 11 point font size.

Paragraphs must be indented.

Numbering Pages

The title page is not to be numbered. Beginning with the Introduction every page of the text must be numbered consecutively in Arabic numerals (1, 2, 3, etc.). Page numbers should appear at the center bottom of each page and should lie within the margin requirements.

Margins

Margins must be 1.0 inch on all sides.

References

References should be cited parenthetically in the text by author and year of publication, example of citation format: (Catalucci et al., 2009). Five major references should be dated within the last two years.

References should be listed alphabetically by first author's last name. The authors must be cited in the order in which they appear in PubMed, even in cases where more than one author contributed equally to the work. Include all authors' names (do not use "et al."). Use the PubMed format, example: Nitrooxymethyl-Substituted Analogues of Rofecoxib: Synthesis and Pharmacological Characterization. Boschi D, Cena C, Di Stilo A, Rolando B, Manzini P, Fruttero R, Gasco A. Chem Biodivers. 2010 May 20;7(5):1173-1182.

Abbreviate the names of journals according to PubMed. Spell out the names of unlisted journals.

DISSERTATION / THESIS FORMATTING

Final Copies

The student must deliver the approved document in a CD-ROM or flash drive, according to the Dissertation / Thesis Manual, to complete the graduation requirements and receive his/hers diploma. The Graduate Programs in Biomedical Sciences will print and bind three (3) copies of the thesis (one for the student, one for the department and one for the library).

Information on Dissertation / Thesis

A thesis should be sufficiently complete to allow an independent investigator or scholar to repeat or verify the work leading to the author's results and conclusions. In certain cases, when manuscripts prepared for publication are to be used, the terseness required by the page restrictions of professional journals may prevent authors from meeting this condition with their publishable manuscripts alone. In such cases, the thesis or report must include additional materials (in appendices, if desired) that will ensure independent reproducibility; e.g., tables, descriptions of methods of unproductive or unsuccessful explorations, derivations, and so forth.

Abstract

An abstract is a summary of the thesis or report to inform prospective readers about its contents. As a brief summary of the candidate's principal research findings, the abstract should state the problem being investigated and outline the method of investigation, the results obtained, and the conclusions reached. In writing the abstract, candidates should keep in mind that it functions chiefly as a guide to students and scholars surveying research in their field. As such, it should provide a concise guide to the entire study it represents. The abstract should not include internal headings or parenthetical citations of items listed in the bibliography/list of references. Figures and tables should not appear in the abstract.

Style and Content

A thesis should be written in a style appropriate to the discipline represented. The faculties of individual departments may establish policies regarding style for their students. In the absence of detailed specifications, the student's committee is responsible for defining the style used. Form, organization, and bibliographical style may be that of pertinent professional publications.

Manuscript Formatting

Each thesis must have a title page, an abstract, and a table of contents, in addition to the text. Manuscripts should contain the following, unless noted as optional, in the order listed:

All headings with asterisk (*) beside them must be centered and in uppercase lettering.

Title Page ADVISORY COMMITTEE ABSTRACT* **TABLE OF CONTENTS*** ACKNOWLEDGMENTS* (Optional) **DEDICATION*** (Optional) PREFACE* (Optional) LIST OF ABBREVIATIONS* LIST OF SYMBOLS* LIST OF FIGURES* LIST OF TABLES* Introduction Text/Chapters Conclusion References and/or bibliography Appendices as needed

Title Pages

The title must be in uppercase letters and meet margin requirements.

Follow format illustrated below.

Advisory Committee Approval Page

Follow format illustrated below.

Abstract

An abstract is a required part of the graduate degree manuscript. The abstract should not contain a page number and should be no more than 350 words.

Physical Requirements

Submission of the original manuscript is not required, but photocopying should be done with care to ensure that margins on all copies are accurate and consistent and the reproduction service provides clean, spot-free copies. Typographical or other errors must be corrected before making copies.

Formatting

Copies must be printed on one side of the page only and must be distinct and of uniform quality throughout the document. They should be printed on high-quality, 50% - 100% white cotton bond paper and 8.5" x 11" in size.

Font

Standard 11 point font size is preferred, but non-standard fonts and size may be used if they are fully legible and acceptable to the thesis / dissertation committee. The font and size should be consistent throughout the document. All the text will be in black color including tables and graphics.

Spacing

Standard double spacing for the text is preferred. Long quotations, footnotes, multi-line captions, and bibliographic entries may be single-spaced. Double spacing should be used between footnotes and bibliographic entries.

Paragraphs must be indented.

Abbreviations

Abbreviations must be spell out the first time they are used. All Abbreviations and their meaning must be included in the list of abbreviations

Numbering Pages

The title pages and abstract pages are not to be numbered. Beginning with the Table of Contents, the List of Figures, List of Tables, Acknowledgments (optional), Dedication (optional) and Preface (optional), use lower case Roman numerals (i, ii, iii, etc.). Beginning with the Introduction or Chapter I, *every page* of the text must be numbered consecutively in Arabic numerals (1,2,3, etc.). Page numbers should appear at the center bottom of each page and should lie within the margin requirements.

Margins

Margins on all pages must allow for binding and trimming. Margins must be 1.5 inches on the left and 1 inch at the top, right side, and bottom. Tables and figures should be reduced photographically to meet margin requirements. Illustrations/maps that cannot be reduced to fit within these margins may be expanded to the right by means of a foldout sheet. In such instances, margins must be 1" inch on the left side and the fold placed 1" inch from the right side of the page.

Footnotes and Endnotes

Use Arabic numerals to indicate a note in the text. Notes may be numbered in one of two ways: either consecutively throughout the entire manuscript or consecutively within each chapter and must be consistent throughout the document. Notes can be placed at the bottom of the page (footnotes), at the end of a chapter, or at the end of the document (endnotes). Once chosen, the notation style must be consistent throughout the document. Notes to information within tables should be placed directly below the table to which they apply, not at the bottom of the page along with notes to the text.

Figures (Photographs/Tables/Graphs)

Pictures, tables, and graphs may be done in color if approved by the committee. There must be a page number on each page containing photographs.

Legends will be in single space. The figure and the legend will be in the same page.

The list of tables and figures will include only titles and not descriptions.

The references for any figures obtained from any source must be included.

References

References should be cited parenthetically in the text by author and year of publication, example of citation format: (Catalucci et al., 2009). Five major references should be dated within the last two years.

References should be listed alphabetically by first author's last name. The will be in single space. The authors must be cited in the order in which they appear in PubMed, even in cases where more than one author contributed equally to the work. Include all authors' names (do not use "et al."). Use the PubMed format. The number of the reference will be on the left margin and not indented.

Example:

1. Nitrooxymethyl-Substituted Analogues of Rofecoxib: Synthesis and Pharmacological Characterization. Boschi D, Cena C, Di Stilo A, Rolando B, Manzini P, Fruttero R, Gasco A. Chem Biodivers. 2010 May 20;7(5):1173-1182.

Abbreviate the names of journals according to PubMed. Spell out the names of unlisted journals.

Author's Published Manuscripts

If approved by the student's committee, previously published manuscripts in the author's name may be incorporated, if it meets the general requirements for permanence, copying, and binding. Such printed material may be incorporated with supplementary typed or reproduced copy as needed. Any tables or figures in the previously published materials must be numbered in accordance with the rest of the thesis, report, or dissertation. It must be paginated consistently with the rest of the document. Only one page number may appear on each page and that is the page number within the final document. Documents must not include material restricted from publication.

Sequestration

In unusual circumstances, a student may request the university act to protect the author's rights in the dissertation by temporarily sequestering the work. If a dissertation or thesis contains material believed to be patentable, the student or major professor should send a letter to the Graduate Programs in Biomedical Sciences, requesting sequestration and offering a brief justification for the delay in publication. If the request is approved, all required copies of the manuscript will be kept in the Graduate Programs in Biomedical Sciences until the sequestration period has ended.

Where the guidelines in this publication are not sufficient, students should contact the Graduate Programs in Biomedical Sciences staff for more detailed information.

Compact Between Biomedical Graduate Students and Their Research Advisors

These guiding principles, known as the *Compact Between Biomedical Graduate Students and Their Research Advisors*, are intended to support the development of a positive mentoring relationship between the pre-doctoral student and their research advisor. A successful student-mentor relationship requires commitment from the student, mentor, graduate program, and institution. This document offers a set of broad guidelines which are meant to initiate discussions at the local and national levels about the student-mentor relationship.

The Compact was prepared by the AAMC Group on Graduate Research, Education, and Training (GREAT).

Pre-doctoral training

Pre-doctoral training entails both formal education in a specific discipline and an apprenticeship in which the graduate student trains under the supervision of one for more investigators who are qualified to fulfill the responsibilities of a mentor. A positive mentoring relationship between the pre-doctoral student and the research advisor is a vital component of the student's preparation to become not only an independent and successful research scientist but also an effective mentor to future graduate students.

Individuals who pursue a biomedical graduate degree are expected to take responsibility for their own scientific and professional development. Faculty who advise students are expected to fulfill the responsibilities of a mentor, including the provision of scientific training, guidance, instruction in the responsible conduct of research and research ethics, and financial support. The faculty advisor also performs a critical function as a scientific role model for the graduate student.

Core Tenets of Pre-doctoral Training

Institutional Commitment

Institutions that train biomedical graduate students must be committed to establishing and maintaining high-quality training programs with the highest scientific and ethical standards. Institutions should work to ensure that students who complete their programs are well-trained and possess the foundational skills and values that will allow them to mature into independent scientific professionals of integrity. Institutions should provide oversight for the length of study, program integrity, stipend levels, benefits, grievance procedures, and other matters relevant to the education of graduate students. Additionally, they should recognize and reward their graduate training faculty.

Program Commitment

Graduate programs should endeavor to establish graduate training programs that provide students with the skills necessary to function independently in a scientific setting by the time they graduate. Programs should strive to maintain scientifically relevant course offerings and research opportunities. Programs should establish clear parameters for outcomes assessment and closely monitor the progress of graduate students during their course of study.

Quality Mentoring

Effective mentoring is crucial for graduate school trainees as they begin their scientific careers. Faculty mentors must commit to dedicating substantial time to graduate students to ensure their scientific, professional and personal development. A relationship of mutual trust and respect should be established between mentors and graduate students to foster healthy interactions and encourage individual growth. Effective mentoring should include teaching the scientific method, providing regular feedback in the form of praise and constructive criticism to foster individual growth, teaching the "ways" of the scientific enterprise, and promoting students' careers by providing appropriate opportunities. Additionally, good graduate school mentors should be careful listeners, actively promote and appreciate diversity, possess and consistently exemplify high ethical standards,

recognize the contributions of students in publications and intellectual property, and have a strong record of research accomplishments and financial support.

Provide Skills Sets and Counseling that Support a Broad Range of Career Choices The institution, training programs, and mentor should provide training relevant to academic, industrial, and research careers that will allow their graduate students to appreciate, navigate, discuss, and develop their career choices. Effective and regular career guidance activities should be provided, including exposure to academic and non-academic career options.

Commitments of Graduate Students

- I acknowledge that I have the primary responsibility for the successful completion of my degree. I will be committed to my graduate education and will demonstrate this by my efforts in the classroom and the research laboratory. I will maintain a high level of professionalism, self-motivation, engagement, scientific curiosity, and ethical standards.
- I will meet regularly with my research advisor and provide him/her with updates on the progress and results of my activities and experiments.
- I will work with my research advisor to develop a thesis/dissertation project. This will include establishing a timeline for each phase of my work. I will strive to meet the established deadlines.
- I will work with my research advisor to select a thesis/dissertation committee. I will commit to meeting with this committee at least annually (or more frequently, according to program guidelines). I will be responsive to the advice of and constructive criticism from my committee.
- I will be knowledgeable of the policies and requirements of my graduate program, graduate school, and institution. I will commit to meeting these requirements, including teaching responsibilities.
- I will attend and participate in laboratory meetings, seminars and journal clubs that are part of my educational program.
- I will comply with all institutional policies, including academic program milestones. I will comply with both the letter and spirit of all institutional safe laboratory practices and animal-use and human-research policies at my institution.
- I will participate in my institution's Responsible Conduct of Research Training Program and practice those guidelines in conducting my thesis/dissertation research.
- I will be a good lab citizen. I will agree to take part in shared laboratory responsibilities and will use laboratory resources carefully and frugally. I will maintain a safe and clean laboratory space. I will be respectful of, tolerant of, and work collegially with all laboratory personnel.
- I will maintain a detailed, organized, and accurate laboratory notebook. I am aware that my original notebooks and all tangible research data are the property of my institution but that I am able to take a copy of my notebooks with me after I complete my thesis/dissertation.
- I will discuss policies on work hours, sick leave and vacation with my research advisor. I will consult with my advisor and notify fellow lab members in advance of any planned absences.

- I will discuss policies on authorship and attendance at professional meetings with my research advisor. I will work with my advisor to submit all relevant research results that are ready for publication in a timely manner prior to my graduation.
- I acknowledge that it is primarily my responsibility to develop my career following the completion of my doctoral degree. I will seek guidance from my research advisor, career counseling services, thesis/dissertation committee, other mentors, and any other resources available for advice on career plans.

Commitments of Research Advisors

- I will be committed to the life-long mentoring of the graduate student. I will be committed to the education and training of the graduate student as a future member of the scientific community.
- I will be committed to the research project of the graduate student. I will help to plan and direct the
 graduate student's project, set reasonable and attainable goals, and establish a timeline for
 completion of the project. I recognize the possibility of conflicts between the interests of externally
 funded research programs and those of the graduate student, and will not let these interfere with
 the student's pursuit of his/her thesis/dissertation research.
- I will be committed to meeting one-on-one with the student on a regular basis.
- I will be committed to providing financial resources for the graduate student as appropriate or according to my institution's guidelines, in order for him/her to conduct thesis/dissertation research.
- I will be knowledgeable of, and guide the graduate student through, the requirements and deadlines of his/her graduate program as well as those of the institution, including teaching requirements and human resources guidelines.
- I will help the graduate student select a thesis/dissertation committee. I will assure that this committee meets at least annually (or more frequently, according to program guidelines) to review the graduate student's progress.
- I will lead by example and facilitate the training of the graduate student in complementary skills needed to be a successful scientist, such as oral and written communication skills, grant writing, lab management, animal and human research policies, the ethical conduct of research, and scientific professionalism. I will encourage the student to seek opportunities in teaching, if not required by the student's program.
- I will expect the graduate student to share common laboratory responsibilities and utilize resources carefully and frugally.
- I will not require the graduate student to perform tasks that are unrelated to his/her training program and professional development.
- I will discuss authorship policies regarding papers with the graduate student. I will acknowledge the graduate student's scientific contributions to the work in my laboratory, and I will work with the graduate student to publish his/her work in a timely manner prior to the student's graduation.
- I will discuss intellectual policy issues with the student with regard to disclosure, patent rights and publishing research discoveries.

- I will encourage the graduate student to attend scientific/professional meetings and make an effort to secure and facilitate funding for such activities.
- I will provide career advice and assist in finding a position for the graduate student following is/her graduation. I will provide honest letters of recommendation for his/her next phase of professional development. I will also be accessible to give advice and feedback on career goals.
- I will provide for every graduate student under my supervision an environment that is intellectually stimulating, emotionally supportive, safe, and free of harassment.
- Throughout the graduate student's time in my laboratory, I will be supportive, equitable, accessible, encouraging, and respectful. I will foster the graduate student's professional confidence and encourage critical thinking, skepticism and creativity.

Termination of the Student-Mentor Relationship

Student Voluntarily Resignation from a Laboratory

Graduate students are not obligated to remain under the direction of the advisor who accepted them. A student who leaves an advisor shall be allowed one full semester to relocate to another advisor. It is the student's responsibility to find a new advisor. If the student has not succeeded in doing so within one full semester (i.e., the full semester immediately following the student's departure from the advisor's directorship), must leave the GPBS or change his/her status to that of a master degree (non-thesis option) student. Students may only change mentor once.

Students who elect to leave an advisor's directorship must notify the advisor, the Department GPBS Coordinator and the GPBS Office in writing.

Dismissal of a Student by his/her mentor

A graduate student is expected to carry out research as part of his/her degree requirements. Research duties and research progress will be determined by the faculty/research advisor. Unsatisfactory performance in research could lead to loss of research supervision. This applies even if the student's GPA meets or exceeds the minimum set by the School.

A student whose research performance is determined to be unsatisfactory will receive a letter from his/her research advisor listing all deficiencies and/or outlining the level of performance required to continue working with the advisor. This will be communicated to the student at least one month before the end of the semester, and a copy will be provided to the Associate Dean for Research and Graduate Studies for inclusion in the student's file. The deficiencies must be remedied before the end of the semester in order to prevent dismissal from the advisor's research group.

A student who no longer has an advisor may seek another advisor with help from the Associate Dean for Research and Graduate Studies. A student who cannot find a new advisor after one semester must change his/her status to that of a master degree (non-thesis option) or leave the School. A graduate student who is dismissed by the UCC for academic or disciplinary reasons will not be readmitted to the School.

Exam Questions

Students will have 10 working days to request points from questions in exams that they believe they have answered correctly. The student must request the revision from the faculty member that prepared the question.

Grievances

The Associate Dean for Research and Graduate Studies is ultimately responsible for grievances regarding policies and procedures related to graduate education. A grievance properly begins within the student's own department by an appeal to the graduate program coordinator or department chair. If this does not resolve the grievance, the student can present the grievance in writing to the Associate Dean for Research and Graduate Studies. Grievances must state clearly and precisely the basis for appeal and provide supporting evidence that a student's rights have been jeopardized.

For all policies, if there are extenuating circumstances, the Associate Dean for Research and Graduate Studies may extend periods, for one additional term, or make reasonable accommodations at his/her discretion. The Associate Dean may recommend that the grievance be reviewed by the Graduate Program in Biomedical Sciences Committee. The Associate Dean is the final arbiter of Graduate School regulations. Students retain the right to appeal the Associate Dean's decision to the Dean of Medicine.

DEFINITIONS

Course Credits

The value used to calculate the total credit hours for each course is equal to the assigned period of contact hours allotted to a course and defined as lecture, laboratory, discussion, research, or supervised independent study.

The total credit hour value for each course will be determined using the following criteria:

1 credit equals 12 contact hours of lecture, discussion or examination or

24 contact hours of supervised independent study or

48 contact hours of laboratory or research

Semester

One semester will consist of 18 working weeks comprised of 90 days (5 days/week) of academic work. Twelve contact hours of lecture, irrespective of the days or weeks used to cover them, will receive the value of one credit. Other activities (i.e., laboratories, etc.) will be evaluated by using the conversion stated in the Credit Hour definition.

Academic Year

1 July to June 30
